- Rates, percentages and confidence limits are not calculated for zero events.

***** Rates are deemed unreliable based on fewer than 20 data elements.

# Denotes a suppressed data element in accordance with Data De-Identification Guidelines. Please see County Health Status Profiles Profiles 2018, Technical Notes, Data Definitions.

a Healthy People 2020 (HP 2020) National Objective has not been established.

b National Objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files.
California's data exclude multiple/contributing causes of death.

c Prevalence data are not available in all California counties to evaluate the Healthy People 2020 National Objective STD-1, as the Healthy People objective is restricted to females who are 15-24 years old and identified at a family planning clinic, and males and females under 24 years old who participate in a national job-training program.

Note Crude death rates, crude case rates, and age-adjusted death rates are per 100,000 population. Birth cohort infant death rates are per 1,000 live births.
The age-specific birth rates are per 1,000 female population aged 15 to 19 years old.
Previous refers to previous period rates. These periods vary by type of rate: Mortality 2011-2013, Morbidity 2011-2013, Infant Mortality 2010-2012, Natality 2011-2013, Census 2014.

† California Department of Public Health, Office of AIDS, HIV/AIDS Surveillance Section reporting periods are: Current Period 2013-2015, Previous Period 2010-2012.
