 $[\]hbox{-- Estimate not shown because the relative standard error (RSE) is greater than 50\% or fewer than 5 women reported.}$

Notes: MIHA is an annual population-based survey of California resident women with a live birth. Data from MIHA 2013-2014 were combined, resulting in a statewide sample size of 13,963. The sample size of Riverside County was 413. Percent (%), 95% confidence interval (95% CI) and estimated number of women in the population with the health indicator/characteristic (i.e., numerator of the percent rounded to the nearest hundred) are weighted to represent all women with a live birth who resided in California and the county in 2013-2014. Population estimate is a two-year average. Symbols indicate whether the health indicator in the county was statistically different from the rest of the state (p-value < 0.05, chi-square test). See the Technical Notes for information on weighting, comparability to prior years and technical definitions. Visit the MIHA website at www.cdph.ca.gov/MIHA. Table Citation: Maternal and Infant Health Assessment (MIHA) Survey Data Snapshots, 2013-2014. California Department of Public Health. 2016.

 $^{^{*}}$ Estimate should be interpreted with caution due to low statistical reliability (RSE is between 30% and 50%).

[†] Measure/definition changed for this indicator and is not comparable to prior years (see Technical Notes).
