EXECUTIVE SUMMARY

A strong and resilient healthcare delivery system requires healthy workers. Hospital-based health care personnel (HCP) who receive annual influenza vaccination help prevent influenza transmission to patients, their families, and the community.

The U.S. Advisory Committee on Immunization Practices recommends HCP receive the annual influenza vaccine [1]. Additionally, the Centers for Disease Control and Prevention recommends the influenza vaccine as the best way for HCP to protect against influenza infection and transmission [2].

To meet the Healthy People 2020 goal hospital HCP vaccination coverage should have been at least 90% in 2022-2023.

Figure 1. Hospital Health Care Personnel Influenza Vaccination Coverage by County, 2022-23

California acute care hospitals must offer influenza vaccination at no cost to HCP, require HCP to receive the annual influenza vaccination or declare in writing that he/she declines vaccination, and report vaccination data to the California Department of Public Health (CDPH) (Health and Safety Code section 1288.7). CDPH is required to publish hospital influenza vaccination coverage no later than six months after receiving

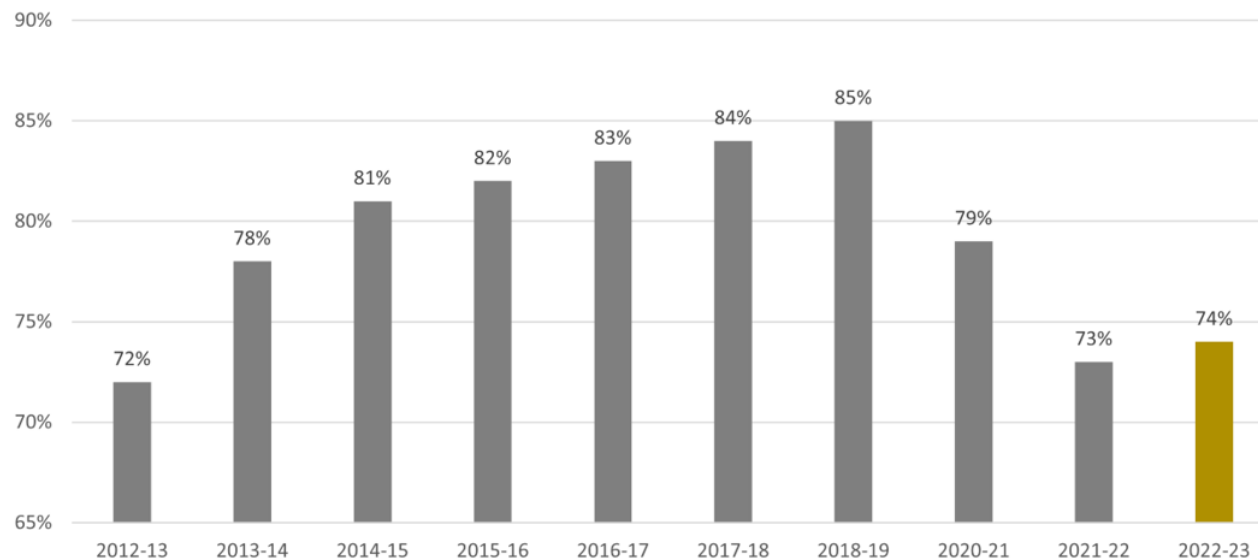

the data (Health and Safety Code section 1288.8). This report presents data from 396 California hospitals for the 2022-2023 influenza season (October 1, 2022, through March 31, 2023) and summarizes vaccination coverage by county (Figure 1).

Overall, California hospitals reached 74% influenza vaccination among HCP in 2022-2023 (Figure 2). In total, among 391 reporting hospitals, only 58 (15%)

hospitals met the 90% Healthy People 2020 goal.

CDPH encourages all persons 6 months of age or older to receive an annual flu vaccine unless they have certain medical conditions that prevent them from getting vaccinated. CDPH suggests members of the public use this report to view vaccination rates of their local hospitals and ask their doctors and other HCP about annual influenza vaccination.

Figure 2. Hospital Health Care Personnel Influenza Vaccination Coverage by Year

ANNUAL REPORT

BACKGROUND

Influenza circulation generally occurs annually, causing serious consequences especially among high-risk persons. Unvaccinated health care personnel (HCP) who are exposed to persons with influenza in the workplace or community can serve as sources for transmitting influenza virus to co-workers and patients. Many hospitalized patients are at increased risk for influenza complications, such as persons 85 years or older who respond poorly to vaccination, immune-compromised patients and those with certain conditions, and young children [1].

Annual influenza vaccination is a simple and safe strategy for reducing the risk of transmitting influenza. HCP who receive annual influenza vaccination help prevent influenza transmission to patients, their families, and the community. A hospital's annual HCP influenza vaccination rate is a quality performance indicator of patient safety.

In 2015, the CDPH Healthcare-Associated Infections (HAI) Advisory Committee recommended that all California hospitals achieve the national Healthy People goal of 90% HCP influenza vaccination by 2020 [3]. To meet the 2020 goal, hospitals should have achieved at least 90% vaccination coverage in 2022-2023.

METHODS

This report presents data for the 2022-2023 influenza season, October 1, 2022, through March 31, 2023. State law requires California acute care hospitals to offer influenza vaccination at no cost to HCP and requires HCP to receive the annual influenza vaccination or declare in writing that he/she declines vaccination (Health and Safety Code section 1288.7). Hospitals collect data for all HCP physically working in the facility for one or more days during influenza season.

Hospitals track HCP vaccination using the National Healthcare Safety Network (NHSN) protocols and report data using the NHSN secure, web-based system

[4]. Hospitals provide rights to the California Department of Public Health (CDPH) to receive, analyze, and publish the data. CDPH is required to publish annual HCP vaccination rates within six months of receiving the data (Health and Safety Code section 1288.8). CDPH downloaded the data for this report on May 16, 2023.

The term HCP refers to all paid and unpaid persons working in health care settings who have the potential to be exposed to patients or infectious materials and have the potential to transmit influenza to and from patients and other HCP. HCP are direct care providers (e.g., physicians, nurses, nursing assistants, therapists, technicians, emergency medical service personnel, pharmacists, laboratory personnel) as well as persons not directly involved in patient care (e.g., clerical, dietary, housekeeping, laundry, security, maintenance, administrative,

billing). HCP include employees paid by the health care facility and other professional, contract, and other staff not directly paid by the health care facility. CDPH reports data separately for hospital employees, licensed independent practitioners, contract personnel, and students, trainees, and volunteers.

In 2022-2023, 391 (99%) of hospitals submitted influenza vaccination reports. The CDPH Licensing and Certification Program may cite hospitals with incomplete reporting and require a plan of correction to address the deficiency. Five (1%) hospitals did not report influenza vaccination data in 2022-2023 (Table 1).

Table 1. Hospitals that did not Report Influenza Vaccination Data, 2022-23

County	Facility Name
Inyo	Southern Inyo Hospital
Los Angeles	Pacific Gardens Medical Center
Orange	Anaheim Community Hospital, LLC
San Bernardino	Totally Kids Rehabilitation Hospital
San Francisco	UCSF Medical Center at Mount Zion

KEY FINDINGS

To reach the Healthy People 2020 goal, statewide vaccination among HCP should be at least 90% in the 2022-2023 influenza season. During the 2022-2023 influenza season, an average 74% of HCP received the influenza vaccine across hospitals.

Influenza vaccination among HCP in California hospitals increased by 1.4% during the 2022-2023 influenza season compared with the 2021-2022 influenza season (Figure 2).

Overall, of 391 hospitals only 58 (15%) hospitals achieved the 90% Healthy People 2020 goal (Table 2).

Figure 2. Hospital Health Care Personnel Influenza Vaccination Coverage by Year

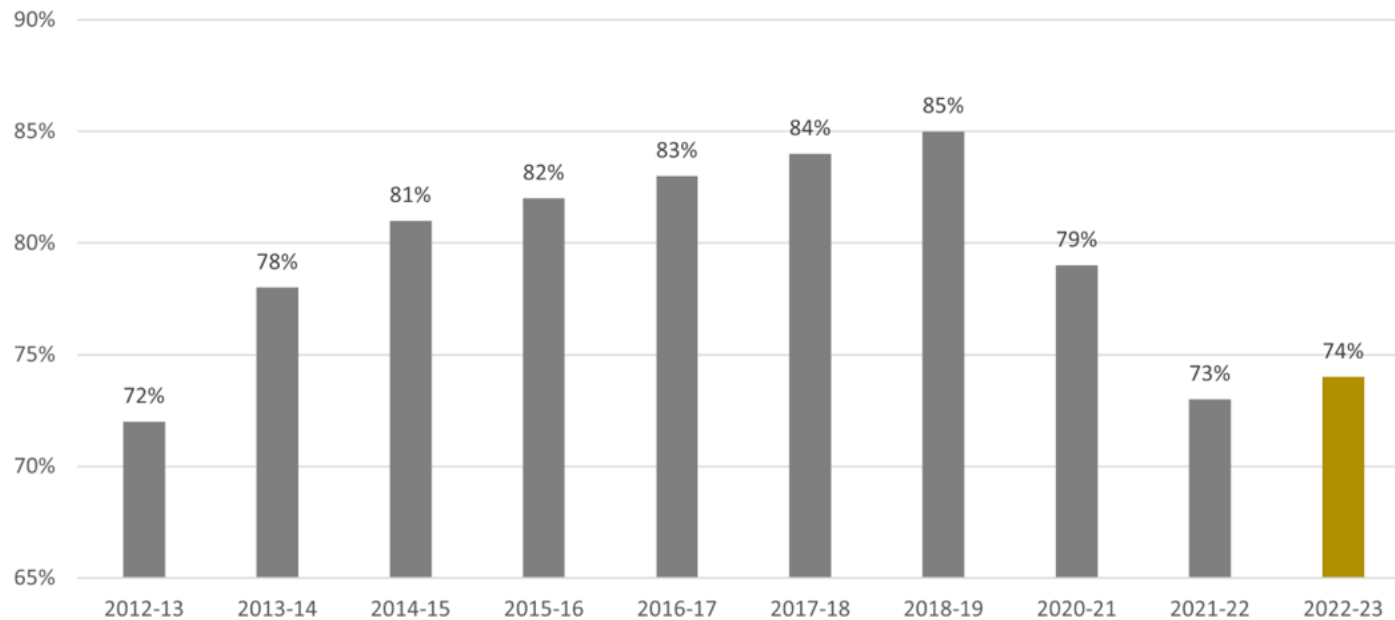

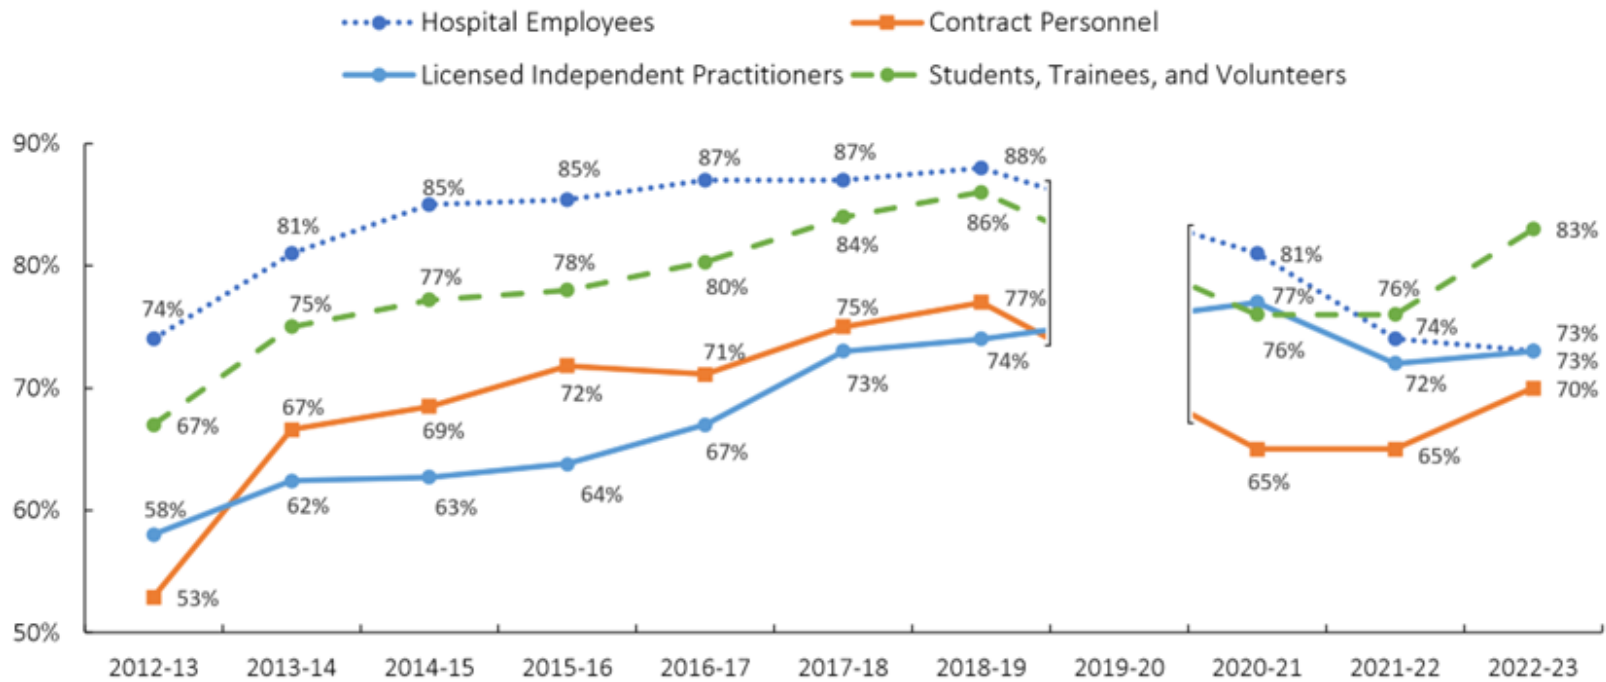

Table 3 shows the list of 57 (14%) hospitals with more than 20% difference in vaccination rate in 2022-2023 compared with 2021-2022. Twenty-three (6%) hospitals reported declines of more than 20% while 34 (9%) hospitals reported improvements of more than 20% (Table 3).

Influenza Vaccination by HCP Category
 In 2022-2023, an average of 73% of hospital employees across hospitals received an influenza vaccine (Figure 3). Influenza vaccination coverage was highest among Students, Trainees, and Volunteers (83%). Contract personnel had lowest influenza vaccination rates

(70%) among the four HCP categories; none of the HCP categories met the 2020 vaccination goal in 2022-2023 (Figure 3, Table 4).

Figure 3. Influenza Vaccination Coverage by Hospital Health Care Personnel Category, 2012-2023

Unknown vaccination status among employees decreased significantly by 21% in 2022-2023 influenza season compared with 2021-22 (11% versus 14%; $p < 0.001$), with 46 hospitals (12%) having more than 25% unknown vaccination rate for this HCP category. Table 4 shows influenza vaccination

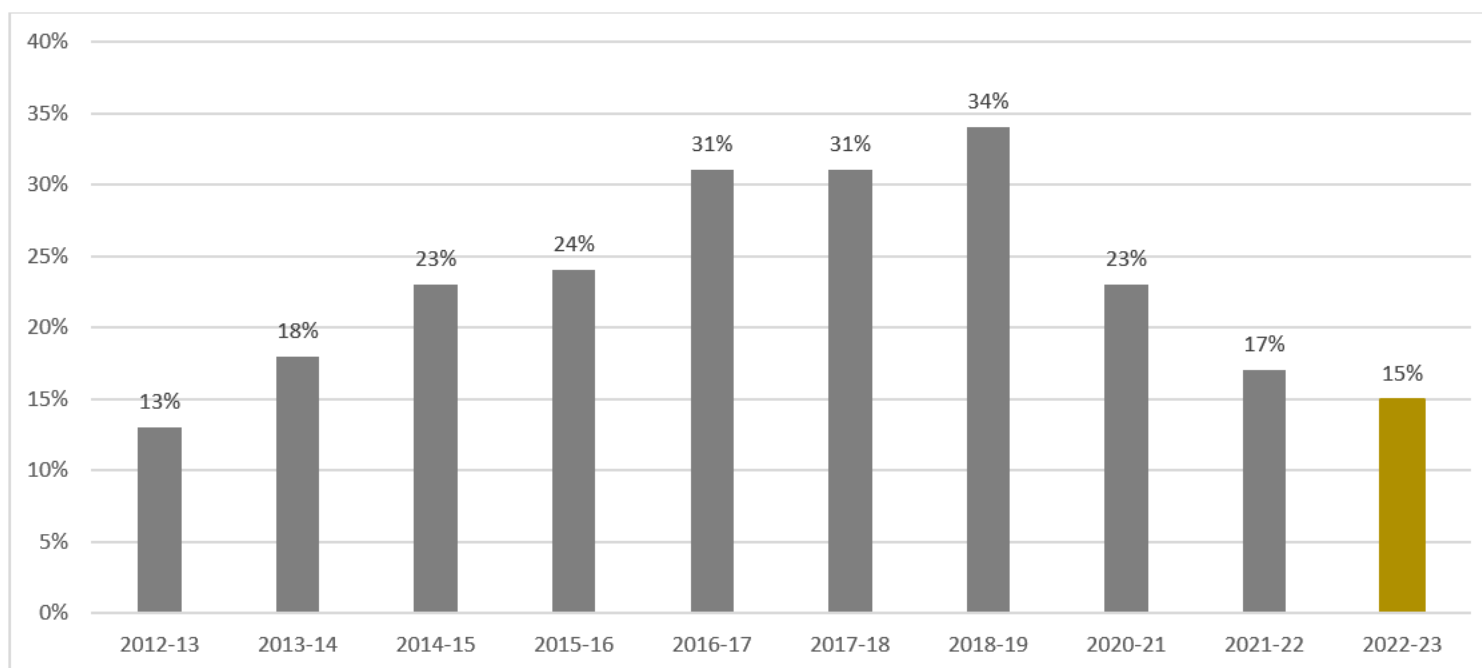

and unknown percentages for employee and non-employee HCP in California Hospitals, 2022-2023.

Influenza Vaccination by Healthy People 2020 Goal Achievement

In 2022-2023, 58 (15%) hospitals met the Healthy People 2020 goal of 90%

HCP influenza vaccination, 12% less than the 2021-22 influenza season (64 hospitals) (Figure 4).

Figure 4. Percentage of California Hospitals that Met the Healthy People 2020 Influenza Vaccination Coverage Goal by Year

Influenza Vaccination by County

Of the 56 California counties with at least one general acute-care hospital in 2022-2023, 2 (4%) met the 2020 goal (Table 5). During the 2022-23 influenza season universal masking was required for all HCP regardless of their influenza vaccination status. Therefore,

the analysis by mask requirement is not included in the 2022-2023 report.

The findings in this report are subject to the limitation of unknown vaccination status for some HCP. It is possible that universal masking requirements for all HCP may have affected influenza vaccination acceptance since masking

requirements for influenza unvaccinated HCP were no longer an incentive [5]. HCP shortages, high rates of absenteeism and use of contracted HCP to mitigate staff shortages might have contributed to the higher proportion of incomplete documentation [5,6,7].

PUBLIC HEALTH RECOMMENDATIONS

CDPH recommends that all HCP receive annual influenza vaccination. In response to this report, CDPH is providing reminders of the importance of HCP influenza vaccination on monthly healthcare facility calls and webinars, and upon request will provide each local public health agency with a list of hospitals in their jurisdiction that have vaccination rates less than 90% and identify which hospitals should be targeted for local public health intervention.

To improve vaccination coverage in hospitals, CDPH recommends that hospitals:

- Review and provide feedback of vaccination rates to HCP throughout the influenza season.
- Target HCP categories with the lowest vaccination rates.

CDPH recommends that members of the public:

- Receive annual influenza vaccination if over 6 months of age and older.
- If not sure a family member should be vaccinated due to medical conditions, check with your doctor or other HCP where you receive care.
- Discuss the risk of influenza for themselves and their families with their doctor or other HCP.
- Ask your doctor or anyone else providing care for you if he/she has received the annual influenza vaccination.
- When visiting a hospital or other health care facility when influenza is circulating in the community, follow any instructions for symptoms screening and masking.

- Review the vaccination rates for HCP at your local hospitals in this written report or by viewing the [CDPH interactive map](http://www.cdph.ca.gov/Programs/CHQ/HAI/Pages/HCPFLUmap.aspx) (www.cdph.ca.gov/Programs/CHQ/HAI/Pages/HCPFLUmap.aspx).

Notes: The data for HCP who declined to receive flu vaccination or those with a medical contraindication are not included but can be provided upon request; Hospitals with zero % vaccination rate reported zero number of workers in that specific HCP category (denominator=0) except for the facilities marked with *.

*Hospital with a vaccination rate of zero % for a specific HCP category that reported zero for numerator and ≥1 working HCP.

NA = Data Not Available
