Notes: MIHA is an annual population-based survey of California resident women with a live birth in 2011, with a sample size of 6,853. Percent (%), 95% confidence intervals (95% CI), and estimated number of women in the population with the health indicator/characteristic (i.e., numerator of the percent rounded to the nearest hundred) are weighted to represent all women with a live birth in California and the region in 2011. Methods used to weight the data in 2011 were different than those used in prior years (see 2011 Technical Document for details on comparability with prior years and indicator definitions).
