

LEO Release Notes: January 2013

This document is intended to inform you of changes to the LEO system associated with the current LEO release. It includes a brief summary of the recent system changes, and a list of known issues.

Brief Summary of Changes

This LEO release includes a number of important new features, including:

- Data entry functionality for the revised HE/RR Forms (including HE/RR and GSAQ)
- C&T Indicator Report functionality for FY 2012-2013
- CIF data entry screen 3 issues have been corrected
- LEO Release Notes are now available via the LEO Main Menu

Other minor changes include:

- HCV validations have been added
- Number of alcoholic drinks field will now accept zero
- Other minor bugs and errors have been corrected, including known issues from previous patch:
 - TPA short forms may now be entered for previous fiscal years, if necessary. (TPA short form is no longer being used as of FY1213.)
 - The 'specify' field for other referrals (CIF) now saves the data appropriately.

Data Entry for HE/RR Forms (HE/RR and GSAQ)

Data entry screens are now available for HE/RR activities. These screens should be used to enter records for client visits documented on the HE/RR and GSAQ forms, including ILIs, GLIs, and TPAs. HCPI forms did not change.

C&T Indicator Report Functionality

The C&T indicator report is an important tool for assessing progress towards CDC goals for C&T activities. This report is now available for all service periods, including FY1213. The report can be accessed via the Reports link from the LEO main menu.

CIF Screen 3 Issues

Data entry screen 3 for the CIF should only be completed for positive clients. In the previous release, if data were inadvertently entered for negative clients, the information could not be deleted, resulting in a validation issue. The validation issue prevented the record from being marked complete. The current release includes a 'reset' button for screen 3 that will delete all data entered to eliminate this issue.

Please review any incomplete C&T records and correct this issue if it exists.

Known Issues

- On the TPA form in the referrals and positive referrals section, when a referral is selected referral agency should be required. However, the system currently allows you to save this section without entering a referral agency. Saving a referral with no referral agency and then re-accessing this section of the record will result in a system error. The work around is to be sure to enter a referral agency for all referrals. This issue will be corrected in a subsequent system update.
- On the TPA, data entry fields are available for Partner Services referred to another agency. However, these data fields are not saved by the system. Note that this works correctly for other form types. This issue will be corrected in a subsequent system update.
