

Client Assessment Questionnaire Score Sheet To Determine Intervention Level of Client

This document is a tool to determine if a client is to receive the low-level or high-level intervention based on **their** responses to the Client Assessment Questionnaire (CAQ).

After a client completes a CAQ, a trained Client Assessment Staff (CAS) ~~is to~~ review the responses to determine if the client is at high-risk for HIV. A client who is considered to be at high-risk for HIV is to be provided the **high-level intervention (HLI)**. A client who is considered to be at low-risk for HIV is to receive the low-level intervention.

To Determine Level of Intervention:

1. If a client responds to Question 1- with any of the answers listed below, they are to be provided the **HLI**:
 - (3) Transgender (male to female)
 - (4) Transgender (female to male)
 - (5) Other, please specify:
2. If a client responds to the following two questions as indicated, then they are to be provided the **HLI**:

Question 1 is (2) Female **and** Question 10 is marked anal sex
3. If a client responds to the following two questions as indicated, then they are to be provided the **HLI**:

Question 1 is (1) Male **and** Question 10 is marked anal **and/or** oral sex
4. If a client answers (1) YES to any of the questions listed below, they are to be provided the **HLI**:

Question 140	Question 145
Question 112	Question 156
Question 123	Question 167
Question 134	Question 178
5. If there is a specific population to be included in the local health jurisdiction's Local Variance Allowance (LVA), then additional questions **may** need to be reviewed to determine if each client fits into the LVA and would therefore be moved into the **high-level** intervention.
6. If none of the responses above are indicated on the CAQ, the client should be provided the **low-level** Intervention.
7. If your HIV test site offers **HCV testing**, the following criteria is used to determine if an HCV test is to be offered to the client:

If a client answers (0) **NO** to the first part of Question 198 **and** if the client answers (1) YES to Question 2019, then an **HCV test should be offered** to the client.
