

The American Heart Association and the Texas/Oklahoma AIDS Education & Training Center (TX/OK AETC) present the third part of a collaborative series entitled:

"Cardiovascular Disease (CVD) and HIV Series"

Participate in this FREE self-study module at your own pace. The 3rd session will feature William J. Robbins, MD, FACP, AAHIVS

OBJECTIVES

- Identify the key principles in managing CVD risk in persons with HIV infection
- Define the most appropriate successful evidence-based therapeutic interventions to reduce the risk of CVD and/or progression including smoking cessation, diet, exercise, blood pressure management, and lipid-lowering therapy
- Integrate significant drug-drug interactions between statins and therapy therapy (ART) into therapeutic decision-making

TARGET AUDIENCE

Cardiologists, Endocrinologists, Infectious Disease Practitioners, HIV Providers, Internal Medicine Practitioners, Family Practitioners, Nurses, Other Primary Care Physicians
