

Table 3. Rates of central line-associated bloodstream infection and central line insertion practices (CLIP) adherence percent in patient care locations providing medical critical care, reported by California major teaching hospitals, January - December 2012 (inclusive).

Reporting hospital*	Cases	Central line-days	Rate	95% Confidence Interval	Statistical interpretation**	CLIP Adherence %
STATE OF CALIFORNIA POOLED DATA	116	61619	1.88			97.0

* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

**Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported (†)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; ----- indicates data not shown due to too few central line-days reported; medical critical care locations specialize in care of critically ill patients with medical conditions
