\* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

\*\*Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported in the location category (†)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; adult oncology special care locations specialize in patients who require management and treatment for cancer and/or blood disorders

**CLABSI Table 32. Rates of permanent central line-associated bloodstream infection in patient care locations providing adult oncology care, reported by California hospitals, January - December 2013 (inclusive)**
