* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

**Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported in the location category (†)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

CLABSI Table 37. Rates of temporary central line-associated bloodstream infection in patient care locations providing adult oncology care, reported by California hospitals, January - December 2013 (inclusive)

Reporting hospital*	Cases	Central line-days	Rate	95% Confidence Interval	Statistical interpretation**
STATE OF CALIFORNIA POOLED DATA	136	71429	1.90		

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; adult oncology special care locations specialize in patients who require management and treatment for cancer and/or blood disorders
