**Incidence rate for hospitals compared to pooled mean rate using 95% confidence intervals.

N=no difference, H=significantly higher, L=significantly lower than pooled mean rate.

Notes: Rates are per 10,000 patient days.

95% confidence intervals calculated based on exact Poisson distribution.

Case mix index was available and listed for most but not all hospitals. The State of California Pooled Data case mix index is the mean of all case mix indices.
