*CLABSI rate per 1000 central line days.

**95% confidence interval calculated for rates based on exact Poisson distribution.

*** Statistical interpretation indicates hospital-specific rates that were statistically higher, lower, or no different than California average rates, or rates that were not tested due to too few central line days or too few hospitals reported.

^ The CLIP bundle includes eight components: hand hygiene, recommend skin preparation agent, allowing the skin preparation agent to dry, and five maximal sterile barriers (cap, mask, gown, gloves, and drape).
