

CLABSI Table 40. Central Line-Associated Bloodstream Infection (CLABSI) Rates Related to Temporary -Type Central Lines in Oncology Medical/Surgical Critical Care Units, Reported by California Hospitals, January-December 2015

County	Hospital Name	CLABSI count	Central line days	Rate per 1000*	95% Confidence Interval**	Statistical Interpretation***	CLIP Adherence %^
	STATE OF CALIFORNIA POOLED DATA	10	3142	3.18			98.2
Los Angeles	City of Hope Helford Clinical Research Hospital	7	2379	2.94	(1.18,6.06)		98.5
Los Angeles	USC Kenneth Norris Jr. Cancer Hospital	3	763	3.93	(0.81,11.49)		98.0

*CLABSI rate per 1000 central line days.

**95% confidence interval calculated for rates based on exact Poisson distribution.

*** Statistical interpretation indicates hospital-specific rates that were statistically higher, lower, or no different than California average rates, or rates that were not tested due to too few central line days or too few hospitals re

^ The CLIP bundle includes eight components: hand hygiene, recommend skin preparation agent, allowing the skin preparation agent to dry, and five maximal sterile barriers (cap, mask, gown, gloves, and drape). CLIP adherence rates for permanent central lines and temporary central lines are combined.
