

## **If you could...**

- ...prevent a mistake or harm from occurring to one patient in your care
- ...make your specific unit or department more friendly, positive and energizing
- ...contribute to a more efficient and streamlined clinical practice
- ...help a colleague with a difficult task or challenging situation
- ...shorten a patient's hospital stay or decrease the cost of hospitalization
- ...promote a feeling of "esprit de corps" among colleagues and peers
- ...increase satisfaction for your patients, for the healthcare team and for yourself
- ...contribute to the excellence of patient care at the place where you practice

## **Would You Do It?**

*If you answered "yes" to any of the situations described above, you are in a perfect position to improve the patient safety culture in your hospital, medical center or healthcare facility.*
