

WIC ISIS CHANGE CYCLE NOTICE July 28, 2014

The following change is now available in ISIS Production as of July 28, 2014.

1. CT4W to CP4 in the Prescribe (enrollment) Path

In the Prescribe path (IRX15M01) enroll or recertify, the issue where if you have a CT4W package for the current month and a CP4 package for the subsequent month and select P (peanut butter), then double or triple issue...the CT4W package will issue peanut butter, but the CP4 package for the subsequent months will issue beans instead of peanut butter. This is also true for an IT4W to a CT4W. This has been fixed and will no longer occur.

Example of Problem that was fixed with this Change Release:

1. Current month (July) is CT4W. Peanut Butter is selected.
