SECTION 1

CIGARETTE SMOKING PREVALENCE
ADULT SMOKING RATES – HISTORICAL TRENDS
Figure 1.1. Adult cigarette smoking prevalence within California and the rest of the United States (US-CA), 1988–2014

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior. An adjustment was made to address the change of smoking definition in 1996 that included more occasional smokers. The weighting methodology changed in 2012 for California but changed for the rest of the United States in 2011. Weighted to the 2000 California population from 1988–2011 and to the 2010 California population since 2012. The U.S. estimate does not include California adults.

Figure 1.2. California adult tobacco use trends, 1996–2014

Note: Respondents aged 18+ were asked to report current cigarette, cigar/cigarillo, pipe, chew, snuff, and snus behavior. Weighted to the 2000 California population from 1988–2011 and to the 2010 California population since 2012. From 1996–2011, current tobacco use is defined as: 1) any tobacco (cigarettes, cigars, little cigars/cigarillos, pipe, chew, snuff, and snus); 2) other tobacco (cigars, little cigars/cigarillos, pipe, chew, snuff, and snus); and 3) dual use (cigarette users who also use another tobacco product). From 2012–2014, electronic cigarettes and hookah pipe were included in the tobacco definition.

Figure 1.3. Adult cigarette smoking prevalence within California by gender, 1988–2014

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior. An adjustment was made to address the change of smoking definition in 1996 that included more occasional smokers. The weighting methodology changed in 2012. Weighted to the 2000 California population from 1988–2011 and to the 2010 California population since 2012.

Figure 1.4. Adult smoking prevalence among California males by race/ethnicity, 2001–2014

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior. California Health Interview Survey is a continuous survey since 2011 and was a biennial survey from 2001–2009. Data for 2011 and 2012 were pooled together. Data for 2013 and 2014 were pooled together.

</tr>
</tbody>
</table>

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior and zip-code of place of residence. Definition of urban, second city, suburban, and rural are from Nielsen Consumer Activation (formerly Claritas): urban areas are population centers that have high population density (more than 4,150 persons per square mile) that represents the central cities of most major metropolitans, second city are population centers that have moderate population density (between 1,000 persons per square mile and 4,150 persons per square mile), suburban areas have moderate population density (between 1,000 persons per square mile and 4,150 per square mile) but are not considered population centers and are dependent on urban areas or second cities, and rural areas have low population densities (fewer than 1,000 persons per square mile). Areas are based on 2010 geoboundaries, 2010 redistricting updates, and 2013 population estimates. Data for 2013 and 2014 were pooled together.

SUBSECTION 1D

SMOKING PREVALENCE AMONG DIVERSE POPULATION GROUPS
Figure 1.11. Adult smoking prevalence and population size of various smoker demographic groups in California, 2013–2014

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior. Low socioeconomic status (SES) is defined as below 185% of the federal poverty level (FPL). Unless otherwise noted, racial groups include only non-Hispanics.

Figure 1.12. Highest smoking prevalence rates among California population groups, 2013–2014

Note: Respondents aged 18+ were asked to report current cigarette smoking behavior. Low socioeconomic status (SES) is defined as below 185% of the federal poverty level (FPL). Unless otherwise noted, racial groups include only non-Hispanics.

ELECTRONIC SMOKING DEVICES & FLAVORED TOBACCO PRODUCTS
SUBSECTION 2A

ELECTRONIC SMOKING DEVICES
Figure 2.1. California adult e-cigarette prevalence, 2014

Note: Respondents were asked to report past 30-day electronic cigarette smoking behavior.
Source: California Health Interview Survey, 2014.
Figure 2.2. California youth cigarette and e-cigarette usage, 2013–2015

Note: Respondents were asked to report past 30-day cigarette and electronic cigarette behavior. Electronic cigarettes include other vaping devices such as e-hookah, hookah pens, or vape pens.

Figure 2.3. California youth e-cigarette prevalence by grade level and gender, 2013–2015

Note: Respondents were asked to report past 30-day cigarette and electronic cigarette behavior. Electronic cigarettes include other vaping devices such as e-hookah, hookah pens, or vape pens.
Figure 2.4. California youth e-cigarette prevalence by grade level and race/ethnicity, 2013–2015

Note: Respondents were asked to report past 30-day cigarette and electronic cigarette behavior. Electronic cigarettes include other vaping devices such as e-hookah, hookah pens, or vape pens.
SUBSECTION 2B

MENTHOL CIGARETTES & OTHER FLAVORED TOBACCO PRODUCTS
Figure 2.5. Percent of current and former adult California smokers that reported recent use of flavored tobacco products or flavored e-cigarettes, 2013–2014

Note: Respondents were asked to report flavored tobacco use in the last six months only if they smoked more than 100 cigarettes in their lifetime. Other tobacco products include only snus, cigars, cigarillos, little cigars, and hookah. Flavor is defined as an additive that creates a distinct taste or smell, such as the taste or smell of fruit, chocolate, vanilla, or honey. Data for 2013 and 2014 were pooled together. Weighted to the 2010 California population.

SECTION 3

TOBACCO CONSUMPTION

SECTION 6

TOBACCO INDUSTRY
SUBSECTION 6A

TOBACCO INDUSTRY EXPENDITURES VS. TOBACCO CONTROL FUNDING
Figure 6.1. California tobacco control expenditure, 1989–2013

Note: Tobacco control expenditures are Health Education Account expenditures for the California Tobacco Control Program and California Department of Education, standardized to the U.S. 2015 dollar based on the Consumer Price Index.

Source: California Department of Public Health for expenditures; Centers for Disease Control and Prevention, Best Practices for Comprehensive Tobacco Control Programs—2014, for CDC recommendation.
SUBSECTION 6B

TOBACCO MARKETING & RETAIL AVAILABILITY
Figure 6.2. Interior tobacco advertisements below three feet by store type, 2008–2014

Figure 6.3. Retail availability of electronic smoking devices by store type, 2011–2014

Note: Electronic smoking devices includes e-cigarette (disposable cigarette lookalikes), rechargeable/refillable e-cigarettes, vape pens/tanks/MODs, e-hookah, e-liquid, and e-cigars.

Figure 6.4. Retail availability of flavored tobacco products by store type, 2014

Note: Flavored tobacco product refers to products that refer to menthol/mint flavors, fruit/sweet/candy flavors (e.g., cherry, vanilla, chocolate), or liquor flavors (e.g., rum, wine, brandy) for chew/snus, little cigars or cigarillos (LCCs), and electronic smoking devices (ESDs). ESD includes e-cigarette (disposable cigarette lookalikes), rechargeable/refillable e-cigarettes, vape pens/tanks/MODs, e-hookah, e-liquid, and e-cigars.

Source: California Tobacco Assessment Study, 2014.
SUBSECTION 6C

TOBACCO SALES TO MINORS
Figure 6.5. Percent of retailers selling tobacco to youth, 1995–2016

Note: Prior to 1997, protocol was based on attempted buy and not actual buy. The 2016 survey was conducted before the effective date that changed the minimum purchase age from 18 to 21.

Figure 6.6. Percent of retailers selling tobacco to youth by store type, 2016

Note: Sales rates are standardized to an equal distribution of youth’s gender and age. The 2016 survey was conducted before the effective date that changed the minimum purchase age from 18 to 21. * Other includes donut shops, discount stores, deli/meat markets, gift stores, produce markets, restaurants, and others.

Figure 6.7. Percent of retailers selling tobacco to youth by urban, suburban and rural, 2007–2016

Note: Urban area is defined as 5,000 people and above per zip code. Rural area is defined as 500 people and under per zip code. All other areas are classified as suburban. The 2016 survey was conducted before the effective date that changed the minimum purchase age from 18 to 21.

Figure 6.8. Percent of retailers displaying tobacco industry age-of-sale warning signs and STAKE Act age-of-sale warning signs, 1998–2016

Note: The definition of a STAKE Act sign changed in 2006 to include non-California Department of Public Health signs that still met the legal requirements.

SECTION 7

SMOKING CESSATION
Figure 7.1. Percent of current California adult smokers thinking about quitting smoking (intent) and quitting one day or longer (attempt) by age, 2013–2014

Note: Respondents who are current smokers aged 18+ were asked if they were thinking about quitting (intention) in the next six months and also if a quit attempt lasting one day or longer was made in the past year. Data for 2013 and 2014 were pooled together.

Figure 7.2. Percent of current California adult smokers who made a quit attempt lasting one day or longer by age and Medi-Cal coverage, 2013–2014

Note: Respondents who are current smokers aged 18+ were asked if they stopped smoking for one day or longer as an attempt to quit smoking and current Medi-Cal coverage. Data for 2013 and 2014 were pooled together.

Table 7.1. Methods used to quit smoking in the past 12 months among California smokers aged 18–64, 2016

<table>
<thead>
