Introduction

The Childhood Lead Poisoning Prevention Branch (CLPPB) has developed this toolkit to assist Childhood Lead Poisoning Prevention Programs (CLPPPs) in their outreach and education efforts during the COVID-19 pandemic.

For children living in homes with lead hazards, the additional time spent at home during the COVID-19 pandemic may be increasing their risk for lead poisoning. Additionally, many families are not keeping up with their well-child visits and children are missing important interventions like blood lead tests and immunizations. The materials in this toolkit were developed to help CLPPPs address these concerns.

This toolkit includes a new resource web page, two new educational flyers, customizable health care provider and patient letter templates encouraging lead safety and well-child visits, and a social media toolkit. All tools are designed to assist CLPPPs in highlighting the importance of lead poisoning prevention during COVID-19 in the communities they serve.
CLPPB has developed a new web page, Resources for Staying Lead-Safe During COVID-19 (https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/CLPPB/Pages/COVIDResources.aspx), to provide information about lead safety during the COVID-19 pandemic. The web page provides lead poisoning prevention resources, including activities for kids, curricula for child care providers, schools and parents, and information about blood lead testing.

In addition to lead-related information, the new web page includes COVID-19-specific resources from the California Department of Public Health, U.S. Centers for Disease Control and Prevention (CDC), and other federal, state, and local health agencies.

CLPPB encourages CLPPPs to use and share this page within their programs, with local partners, and with others in their communities. CLPPB will continue to add educational materials and resources to the web page as they become available. The screen shots below show the general layout of the resource page.
Educational Flyers for Lead Poisoning Prevention During COVID-19

The two bilingual (English/Spanish) educational flyers in this toolkit address potential lead exposures that may be occurring more frequently while families are spending more time at home during the COVID-19 pandemic. One flyer focuses on potential sources of lead that may be found in or around the home, while the other highlights the importance of implementing lead-safe practices when performing construction activities or home renovations.

These educational flyers can be printed and posted (with permission) in locations still frequented by parents and families. Some high-traffic areas include:

- Shopping centers
- Grocery stores
- Hardware/home improvement stores
- Food banks
- Schools
- Libraries (including library websites)
- Neighborhood parks
- Community centers
- Faith-based organizations
- Health centers/clinics
- Farmer’s markets
- Bus stops

CLPPB also encourages CLPPPs to send digital copies of these educational flyers to community partners and local organizations, highlighting the need for increased attention to lead poisoning prevention efforts during the COVID-19 pandemic. Suggested platforms for message dissemination include:

- Social media outlets
- Health department and/or community partner websites
- Advertisements (e.g., billboards, buses, newsletters, radio)
Is Lead Hiding in Your Home?

Some sources of lead might surprise you. Learn where to look for lead in and around your home.

- Peeling or deteriorated paint and dust in older homes and bare dirt outside—Pintura descascarada o deteriorada y polvo en casas viejas y tierra descubierta
- Work clothes and shoes if household members work with lead—Ropa de trabajo y zapatos de los miembros de la casa que trabajan con plomo
- Some traditional remedies, cosmetics, or ceremonial powders—Algunos remedios tradicionales, cosméticos, o polvos ceremoniales
- Some imported foods and spices brought to the U.S. by family and friends—Algunas comidas y especias importadas, especialmente las especias de colores brillantes que han sido traídas a los EE. UU. por amigos y familia
- Some ceramic dishes and lead crystal—Algunas cerámicas y cristal de plomo
- Some toys, jewelry, and other objects—Algunos juguetes, joyas y otros objetos
- Plumbing containing lead/lead pipes or fixtures—Plomería o grifería que contiene plomo
- Bullets and fishing sinkers—Balas y plomos de pesca
- Some candy from outside the US—Algunos dulces importados

If you think your child might be at risk for lead exposure, ask your child’s doctor about a blood lead test.

Fixing Up Your Home During COVID-19?
Learn how to be lead-safe.

Many people are repairing or remodeling their homes during COVID-19. If you are working on an older home, make sure you know how to keep your family safe from lead hazards.

Homes built before 1978 may have lead in the paint. Scraping or sanding old paint can create dangerous lead dust, which is very harmful to young children and can cause lead poisoning. Lead can harm the brain, nerves, and kidneys of a young child and can make it hard for them to learn, pay attention, and behave.

Before you renovate or remodel:
- Have your paint tested for lead.
- Hire a CA State Certified lead professional. These professionals are trained to test for lead in your home and safely remove it.
- For more information, visit cdphe.ca.gov/Programs/CCDPHP/DEODC/CLPPB/Pages/home_test.aspx.

If you do not plan to hire a lead professional, follow these tips to help contain the lead dust while you work.

Before you work:
- Tape down plastic sheeting for inside and outside jobs.
- Make a curb by taping plastic sheeting over the doorway to the work area.
- Put on work clothes or disposable coveralls and keep them separate from other clothes.

While you work:
- Keep children, pregnant women, and pets away.
- Use a spray bottle to mist all surfaces with water before and during sanding and scraping.
- Do not leave the work area in your work clothes or shoes.

After you work:
- Clean up daily. Use a spray bottle to mist paint chips, fold plastic sheeting inward, and place in a sealed bag.
- Place work clothes and shoes in a bag. Shower and wash your hair. Wash work clothes separately.

If you think your child or other household member has been around lead, ask your doctor to test for lead poisoning.

---

¿Arreglando su casa durante COVID-19?
Aprenda a estar a salvo del plomo.

Muchas personas están reparando o remodelando sus casas durante COVID-19. Si está trabajando en una casa vieja, asegúrese de saber cómo mantener a su familia a salvo de los peligros del plomo.

Las casas construidas antes de 1978 pueden tener plomo en la pintura. Raspar y lijando la pintura vieja puede crear un peligroso polvo de plomo, que es muy perjudicial para los niños pequeños y puede causar envenenamiento por plomo. El plomo puede dañar el cerebro, los nervios y los riñones de un niño pequeño y puede ser difícil aprender, prestar atención y comportarse.

Antes de renovar o remodelar:
- Haga una prueba de plomo en su pintura.
- Contrate a un profesional del plomo que tiene certificación por el Estado de California. Estos profesionales están capacitados para detectar plomo en su casa y removerlo en una manera segura.

Si no va a contratar a un contratista, siga estos consejos para ayudar a controlar el polvo de plomo mientras trabaja.

Antes de trabajar:
- Asegure hojas de plástico para trabajos tanto adentro como afuera.
- Haga una cortina asegurando láminas de plástico en la puerta de entrada a la zona de trabajo.
- Póngase ropa de trabajo o ropa desechable y manténgalos separados de otra ropa.

Mientras trabaja:
- Mantenga a los niños, las mujeres embarazadas, y los animales lejos.
- Utilice una botella de aerosol para humedecer todas las superficies con agua antes y durante el lijado y el raspado.
- No salga del área de trabajo con la ropa o zapatos de trabajo puesta.

Después de trabajar:
- Limpie todos los días, utilice una botella de aerosol para regar con agua las partículas de pintura.
- Coloque la ropa de trabajo y los zapatos en una bolsa. Dúchese y lave el cabello. Lave la ropa de trabajo por separado.

Si usted piensa que su hijo o un miembro de su familia ha estado en contacto con plomo, pregunte a su médico acerca de una prueba de plomo en la sangre.

Two template letters are provided for CLPPP outreach to health care providers during the COVID-19 pandemic. The first letter encourages providers to continue with lead prevention efforts and highlights specific actions caregivers and families can take to reduce lead risks to children. The second letter is a resource for health care providers to send to families encouraging them to return to their health care provider’s office for well-child visits. Both letters are customizable. You may also include health care provider and patient education materials with these letters.

**Template Letter to Health Care Providers**

Adapted from San Francisco CLPPP. Copy and paste the text into your jurisdiction’s official letterhead.

Dear Medical Provider,

First and foremost, we want to thank you for your commitment to caring for your patients during these challenging times. The Childhood Lead Poisoning Prevention Program (CLPPP) will continue to be available to assist you in providing guidance and resources on lead poisoning prevention throughout the duration of the COVID-19 pandemic and thereafter. Please do not hesitate to contact us if the need arises.

Lead-contaminated dust is one of the most common causes of elevated blood lead levels in children. Dust and soil may become contaminated from chipped or peeling lead-based paint, emissions from industrial practices, and legacy contamination from leaded gasoline. When lead dust is present in the home environment, children are at greater risk for ingesting lead dust due to mouthing and crawling behaviors. Now that children and their families are spending more time at home, it is a critical time to educate parents and caregivers on how to prevent lead poisoning.

**These simple actions can help protect families and children from lead exposure and lead poisoning:**

- Wash hands with soap and water before eating and sleeping and after playing and gardening.
- Wash toys frequently and dispose of toys with chipping paint.
- Clean dusty surfaces frequently: Use water and an all-purpose cleanser to wet mop hard floors and wipe windowsills and other hard surfaces with a wet paper towel or sponge. Vacuum area rugs, wall-to-wall carpet and upholstered furniture. If possible, use a vacuum with a built-in High Efficiency Particulate Air (HEPA) filter.
- Remove shoes before entering the home.
- Prevent children from playing on or in bare soil. Soil may contain lead.
- Ensure house paint remains intact.

Although damaged and peeling paint is a primary source of lead exposure in the home, there are other potential lead sources, including:

- Lead pipes and water fixtures
• Children’s toys (especially if old or deteriorated)
• Imported traditional cosmetics, jewelry, ceramics, pottery, foods, candies and spices
• Traditional/Home remedies
• Religious powders
• Take-home exposures from a job or hobby.

If you have any questions or would like to request more information, please feel free to contact CLPPP at XXX-XXX-XXXX or www.CountyCLPPP.gov. I would be more than glad to talk with you over the phone, meet in person when it is safe to do so, or provide training for your staff. Enclosed, please find XXXX materials that can be shared with your patients. Additional copies are available, free of charge.

Sincerely,
Dear Parents,

During these challenging times, please know that we are here for you. Your child’s health and safety are our top priority, and we have made it safe for you and your child to come in for routine checkups, blood lead screenings, and immunizations.

We have taken extra precautions to help protect you and your family as well as our staff during COVID-19, including: [Please omit the ones that do not apply]

- Wearing masks at all times.
- Disinfecting exam rooms between patients.
- Separating well visits from sick visits.
- Checking each person’s temperature before they enter the building.
- Limiting provider visits to one caregiver per child.
- Allowing parents/caregivers to check in for their appointment from their car.
- Answering your questions over the phone or computer before your appointment, to minimize time spent at the clinic.
- Offering curbside visits in our parking lot! Please park and call our office upon arrival. We’ll come out to see you!

Tips for keeping your child safe during your visit:

- Is your child 2 years of age or older? Please have them wear a mask before entering our clinic (do not use if your child has trouble breathing). Parents and caregivers also need to wear a mask.
- Use hand sanitizer before entering and after leaving our clinic. We have some available by the front door!
- Please call us upon arrival and wait in your car. We’ll let you know when we are ready to see you.

Please call our office at (XXX) XXX-XXXX to schedule your child’s checkup, follow-up or immunization appointment. Staying on track with needed checkups, blood lead testing, and immunizations, especially during COVID-19, is very important to your child’s health. Enclosed, please find XXXX materials that provide more information about lead poisoning prevention.

With you in health,

Dr. [your name here]
Estimados padres/cuidadores,

Durante estos tiempos tan difíciles, le queremos informar que estamos aquí para servirle. La salud y seguridad de su hijo son nuestra máxima prioridad. Hemos asegurado para usted y su hijo acudir a chequeos de rutina, pruebas de plomo en la sangre e inmunizaciones.

Hemos tomado precauciones adicionales para proteger a usted y a su familia, así como a nuestro personal durante COVID-19, incluyendo: [Omit the ones that do not apply/Omita las que no correspondan]

- Usar máscaras en todo momento.
- Desinfección de salas de examen entre pacientes.
- Separar las visitas de niños sanos y enfermos.
- Verificar la temperatura de cada persona antes de entrar al edificio.
- Limitar las visitas al médico a un padre/cuidador por niño.
- Permitir que los padres o cuidadores se registren para su cita desde su automóvil.
- Responder a sus preguntas por teléfono o computadora antes de su cita, para minimizar el tiempo que pasa en la clínica.
- ¡Ofreciendo visitas al aire libre en nuestro estacionamiento! Por favor, estacione y llame a nuestra oficina cuando llega. ¡Saldremos a verlos!

Consejos para mantener su hijo seguro durante su visita:

- ¿Su hijo tiene 2 años de edad o más? Por favor, pídale que usen una mascarilla antes de entrar a la clínica (no la use si su hijo tiene problemas para respirar). Los padres y cuidadores también deben usar una mascarilla.
- Use desinfectante para manos antes de entrar y después de salir de la clínica. ¡Tenemos desinfectante disponible por la puerta principal!
- Por favor llámenos cuando llega y espere en su automóvil. Le avisaremos cuando estemos listos para verlos.

Por favor, llame a nuestra oficina al (XXX) XXX-XXXX para programar un chequeo médico para su hijo, hacer una cita de seguimiento, o vacunación. Manténgase al día con chequeos médicos, pruebas de plomo en la sangre, y vacunas, especialmente durante COVID-19, es importante para la salud de su hijo. Adjunto, encontrará materiales XXXX que brindan más información sobre la prevención del envenenamiento por plomo.

Con usted en salud,

Dr. [your name here/su nombre aquí]
COVID-19 Social Media Toolkit

The social media messages in this toolkit can be tailored to meet your community’s needs.

This social media toolkit provides CLPPPs with sample messaging, stock images, and hashtags to use when conducting outreach and education with parents and caregivers via social media platforms during COVID-19. Messages focus on lead prevention efforts parents can take during COVID-19 and encourage parents to continue scheduling and attending routine well-child visits. Other sample messages in this toolkit address the actions health care providers and clinics are proactively taking to alleviate concerns surrounding health care provider visits during COVID-19.

“It’s Safe to Come In” Sample Messages:

Sample message 1
It’s OK to see the doctor during #COVID19. Clinics are taking additional safety measures to protect your child, such as separating sick visits from well visits. Some clinics even offer curbside appointments. #ItsSafeToComeln

Está bien ver al médico durante COVID-19. Las clínicas están tomando medidas de seguridad adicionales para proteger a su hijo, como separar las visitas de niños enfermos y sanos. Algunas clínicas ofrecen servicios al aire libre, donde puede recibir atención sin salir del automóvil. #EsSeguroEntrar

Sample message 2
It’s time to go back to the doctor! Checking your child’s milestones and staying up to date on lead screenings and immunizations are an important part of your child’s health, even during #COVID19. Schedule a checkup today. #ItsSafeToComeln #CallYourDoctor

¡Es hora de regresar al médico! Verificar el progreso de su desarrollo y mantener al día con las pruebas de plomo en la sangre y las vacunas son importantes para la salud de su hijo, aun durante #COVID19. Haga una visita al médico hoy mismo. #EsSeguroEntrar #LlameaSuMédico

Sample message 3
Doctors and nurses are taking extra steps to help protect patients from the spread of #COVID19. Schedule your child’s checkup and any lead tests or shots you may have skipped while staying at home. Your child’s health and safety are top priorities! #ItsSafeToComeln #CallYourDoctor

Los médicos y las enfermeras están tomando medidas adicionales para ayudar a proteger a los pacientes de la propagación del #COVID19. Programe el chequeo de su hijo y cualquier prueba de plomo en la sangre o vacuna que se haya saltado mientras estaba en casa. ¡La salud y la seguridad de su hijo son muy importantes! #EsSeguroEntrar #LlameaSuMédico
Sample message 4
Worried about keeping your child healthy during #COVID19? You’re not alone. Talk with your doctor about staying up to date with immunizations, lead screenings, and developmental milestones. #CallYourDoctor

¿Preocupado por mantener sano a su hijo durante #COVID19? No estás solo. Hable con su médico sobre cómo mantenerse al día con las vacunas, las pruebas de plomo en la sangre y los hitos del desarrollo. #LlameaSuMédico

Sample message 5
It’s been a tough year, and keeping your child safe and healthy has been your top priority. Your doctor is also doing the same by taking extra precautions to make visits safe. Schedule your child’s checkup today! #ItsSafeToComeIn #CallYourDoctor

Ha sido un año difícil y mantener a su hijo seguro y sano han sido más importante para usted. Su médico también está haciendo lo mismo al tomar precauciones adicionales para que las visitas sean seguras. ¡Programe la visita al médico para su hijo hoy mismo! #EsSeguroEntrar #LlameaSuMédico

Sample message 6
Does it feel like it’s been a while since you’ve visited the doctor for your children’s well-child visit? You’re not alone. Many families are concerned about staying safe during #COVID19. But don’t worry! Doctors and clinics are taking extra precautions to make sure you and your family remain safe during your visit. Call your doctor to schedule your visit and stay up to date with lead tests, vaccinations, and more! #ItsSafeToComeIn #CallYourDoctor

¿Se siente como si hubiera pasado un tiempo desde que visitó al médico para sus hijos? No estás solo. Muchas familias están preocupadas por mantenerse seguras durante #COVID19. ¡Pero no se preocupe! Los médicos y las clínicas están tomando precauciones adicionales para asegurarse de que usted y su familia permanezcan seguros durante su visita. ¡Llame a su médico para programar su visita y mantenerse al día con las pruebas de plomo en la sangre, las vacunas y más! #EsSeguroEntrar #LlameaSuMédico

Sample message 7
Unfortunately, spending more time at home during #COVID19 may mean the potential for higher risk of lead poisoning. #CallYourDoctor today to ask about a blood lead test for your child. Don’t worry, doctors and clinics are taking extra precautions to make sure you and your family stay safe from the spread of COVID-19. #ItsSafeToComeIn #CallYourDoctor

Desafortunadamente, pasar más tiempo en casa durante el #COVID19 puede significar un mayor riesgo de envenenamiento por plomo. #LlameaSuMédico hoy para preguntar sobre una prueba de plomo en la sangre para su hijo. No se preocupe, los médicos y las clínicas están tomando precauciones adicionales para asegurarse de que usted y su familia estén a salvo de la propagación del COVID-19. #EsSeguroEntrar #LlameaSuMédico
