

# SKYLIGHTS, ROOF AND FLOOR OPENINGS

## Things to do before giving this tailgate training

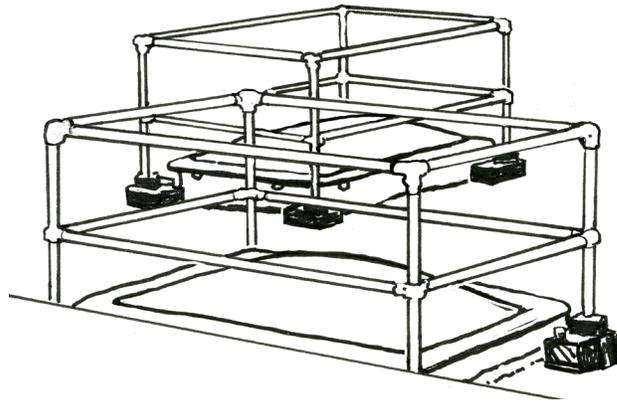

- ▶ Be ready to discuss where guardrails, covers, screens, and fall restraint/fall arrest systems are used or should be used on the jobsite where there are skylight, roof or floor openings.
- ▶ Review Key Training Points on the back of card 8a (different areas can be covered at several tailgates).
- ▶ Look up *guardrails, floor, roof, screen, and fall protection* in the index and read the pages in the Cal/OSHA Pocket Guide for the Construction Industry ([http://www.dir.ca.gov/dosh/dosh\\_publications/ConstGuideOnline.pdf](http://www.dir.ca.gov/dosh/dosh_publications/ConstGuideOnline.pdf)).
- ▶ Download a copy of the video *Preventing Falls in the Solar Industry* (see download instructions: <http://www.cdph.ca.gov/programs/ohb-face/Pages/SolarAction.aspx>) onto a DVD or flash drive or view the video on YouTube: <http://dld.bz/cJd7z>.
- ▶ Make sure the computer you plan to show the video on has good speaker volume, and choose a viewing location that isn't too bright.
- ▶ Be prepared to discuss what happened in the video and your company's practices for preventing falls when working around skylights, roof or floor openings.

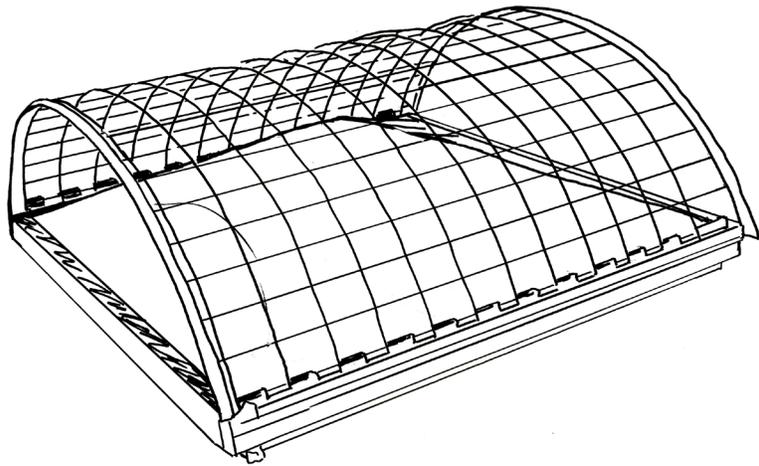

## SAFETY BREAK

## Guardrails

## Screens

## Fall Arrest
