The purpose of this application is to improve the efficiency of surveillance activities and the early detection of public health events through the collection of more complete and timely surveillance information on a state wide basis. CalREDIE is a secure, web-based electronic solution for health care providers to report cases of conditions of public health interest; and for laboratories to report laboratory reports for notifiable conditions to LHDs and the CDPH. CalREDIE is an integral part of the overall California public health emergency preparedness and response strategy where completion and implementation of CalREDIE allows for 24/7/365 reporting and receipt of notifiable conditions. LHDs and CDPH will have access to disease and laboratory reports in near real-time for disease surveillance, public health investigation, and case management activities. CalREDIE is the system of record for communicable disease surveillance data within California.

The encryption solution must be full disk unless approved by the CDPH Information Security Office.
- c) **Server Security.** Servers containing unencrypted Protected Data must have sufficient administrative, physical, and technical controls in place to protect that data, based upon a risk assessment/system security review.
- d) **Minimum Necessary.** Only the minimum necessary amount of Protected Data required to perform necessary business functions may be copied, downloaded, or exported.
- e) **Removable media devices.** All electronic files that contain Protected Data data must be encrypted when stored on any removable media or portable device (i.e. USB thumb drives, floppies, CD/DVD, Blackberry, backup tapes etc.). Must be encrypted using a FIPS 140-2 certified algorithm, such as Advanced Encryption Standard (AES), with a 128bit key or higher
- f) **Antivirus software.** All workstations, laptops and other systems that process and/or store Protected Data must install and actively use comprehensive anti-virus software solution with automatic updates scheduled at least daily.
- g) **Patch Management.** All workstations, laptops and other systems that process and/or store Protected Data must have security patches applied, with system reboot if necessary. There must be a documented patch management process which determines installation timeframe based on risk assessment and vendor recommendations. At a maximum, all applicable patches must be installed within 30 days of vendor release.
