

The California Prenatal Screening Program

Would you like your prenatal screening MSAFP specimens to arrive at the lab just one day after shipment?

Would you like to be able to track your MSAFP specimens during shipment?

The Program can make this happen for you!

At no cost to you!

You now have a special opportunity to use a courier, General Logistics Systems (GLS), for MSAFP specimen delivery to the California Prenatal Screening Program.

While the post office can still be used to mail MSAFP specimens, the Program would strongly encourage you to start using GLS.

There is **no charge** to clinicians or draw stations for GLS delivery services. This company may be able to pick up samples for your facility, or you can drop them off at a local drop box. See attached flyer for details.

The advantages of using GLS include:

- Just one day in transit, ensuring that blood analytes won't have expired on arrival.
- Ability to track your MSAFP specimen shipments on-line.
- Faster turnaround for results.

****GLS should not be used to ship cfDNA specimens. cfDNA specimens should be shipped directly to the cfDNA laboratory listed on the Consent and Order Confirmation form****

If you are interested in this opportunity, please complete the enclosed form, and email it to: govtaccts@gls-us.com.

Once the complete information is received, you will be contacted by GLS to obtain the necessary free shipping supplies and instructions.

For any questions about GLS, please contact:
Government Accounts Team

Phone: (916) 542-9390
