California Personal Responsibility Education Program

Survey Results

January 1, 2021 - January 31, 2022

Purpose

This Survey Results Dashboard includes data from California Personal Responsibility Education Program (CA PREP) participants who completed entry and exit surveys between January 2021-January 2022. The dashboard presents information on participants' background characteristics, sexual experiences, awareness and use of sexual and reproductive health (SRH) services, SRH knowledge, and perceptions and experiences related to CA PREP. These data help identify program successes and provide opportunities for quality improvement.

Participant characteristics, at program entry

Figure 1. Percentage of participants by gender identity (n = 6,071)

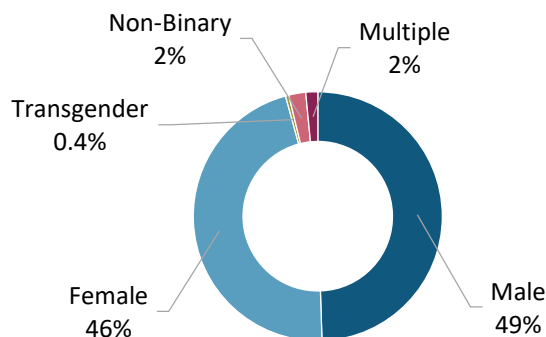

Figure 2. Percentage of participants by sexual orientation (n = 5,572)

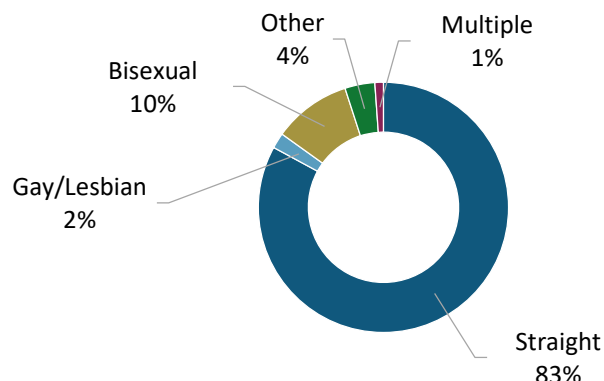

Figure 3. Percentage of participants by age, in years (n = 6,863)

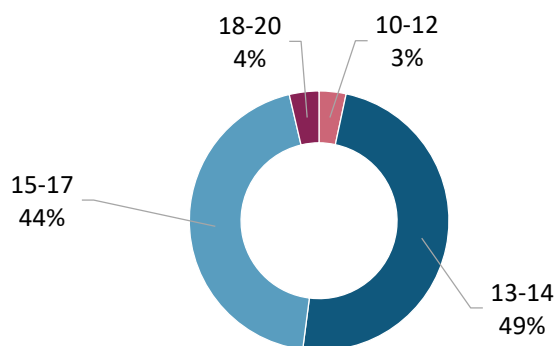

Figure 4. Percentage of participants by housing status (n = 6,732)

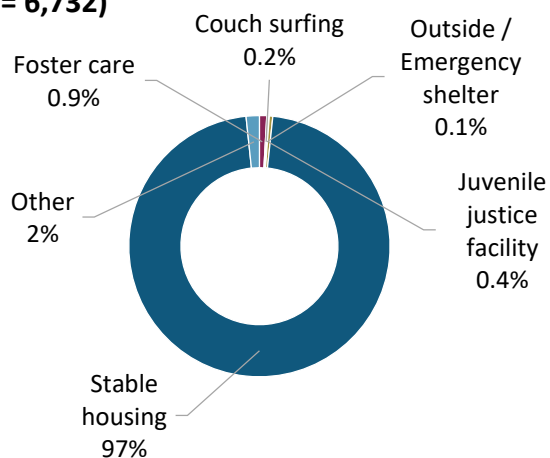

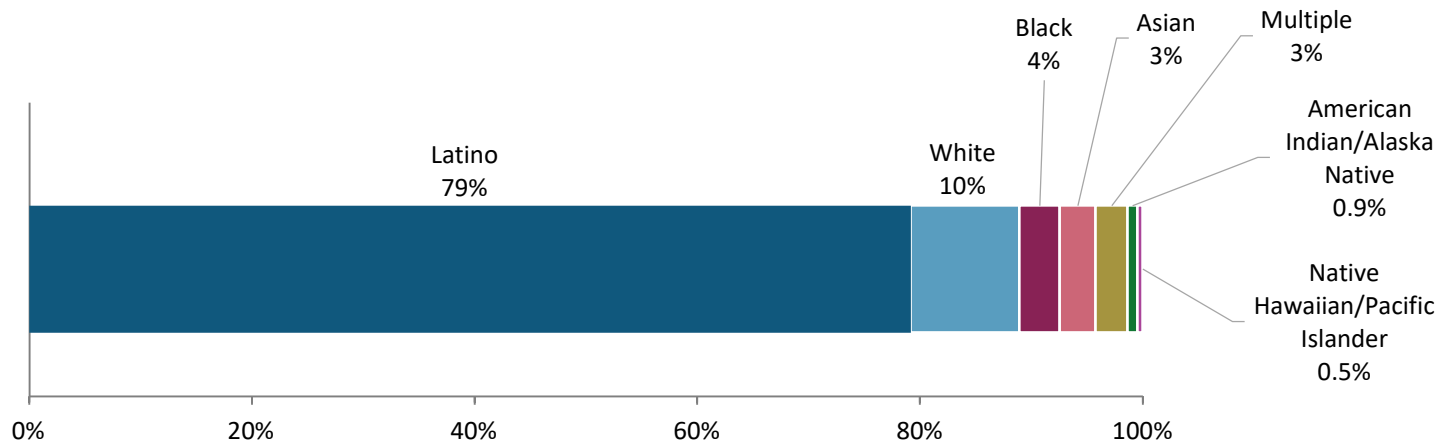

Figure 5. Percentage of participants by race and ethnicity (n = 6,748)

Sexual experiences and use of SRH services, at program entry

Figure 6. Percentage of participants who ever had sexual intercourse (n = 6,332)

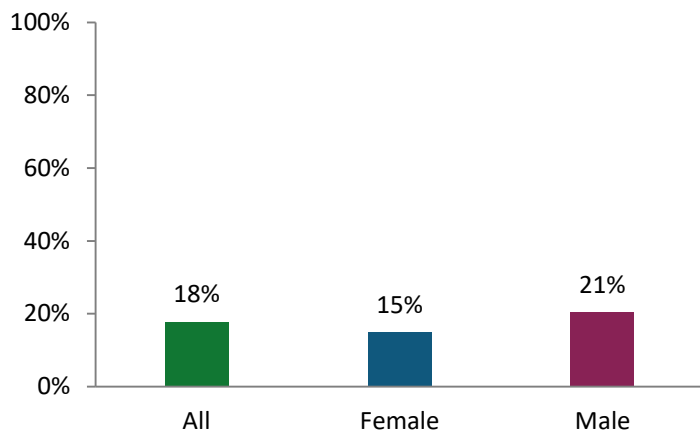

Figure 7. Among those who ever had sex, percentage of participants who used a contraceptive method at last sex (n = 1,124)

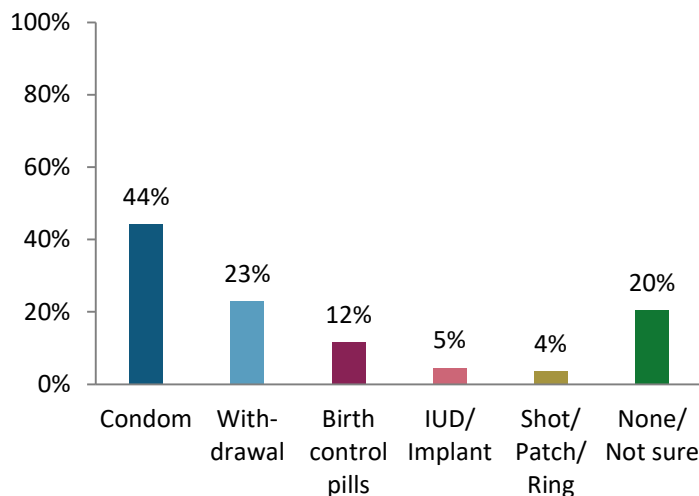

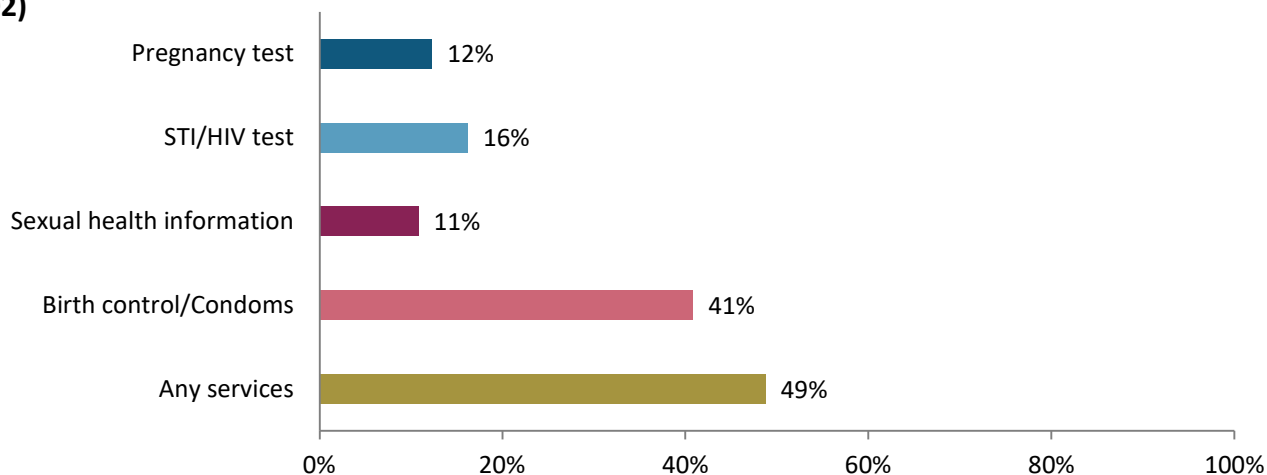

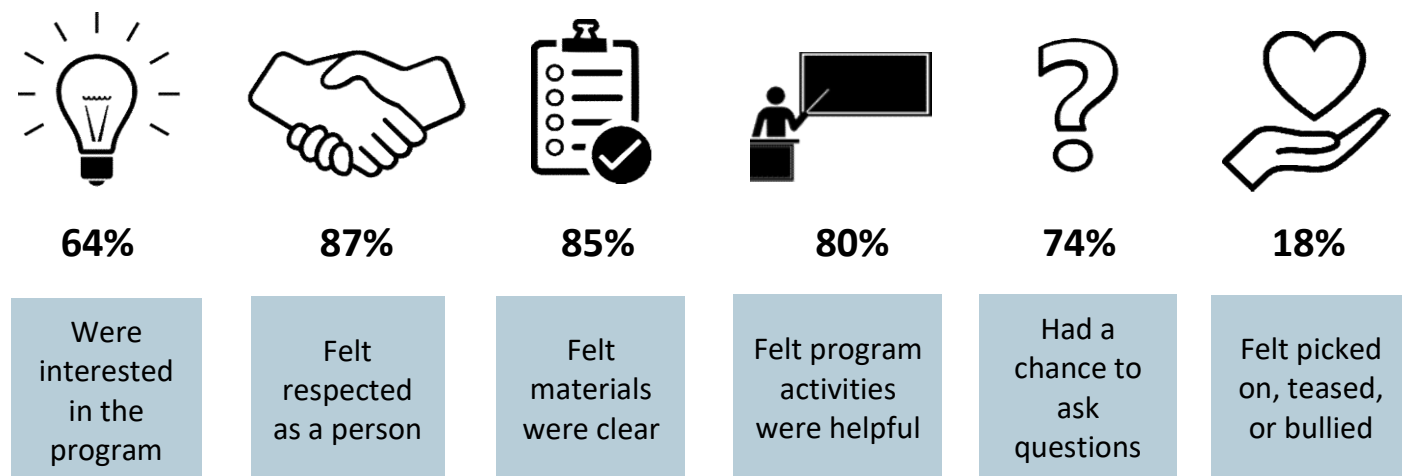

Figure 8. Among those who ever had sex, percentage of participants who ever received SRH services (n = 1,002)

Participant perceptions of the program, at program exit

Figure 9. Participant perceptions of the program (n = 5,095)

Sexual behavior, at program exit, and changes in perceptions of SRH services and SRH knowledge, from program entry to exit

Figure 10. Among participants who plan to have sex in the next three months, percentage who responded they were somewhat or much more likely to use birth control and/or condoms after the program (n = 1,520)

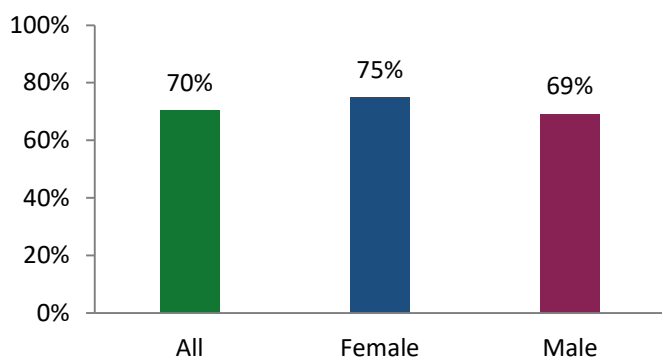

Figure 11. Change in percentage of participants who reported they had heard of SRH services in their community at entry and exit (n = 2,652)

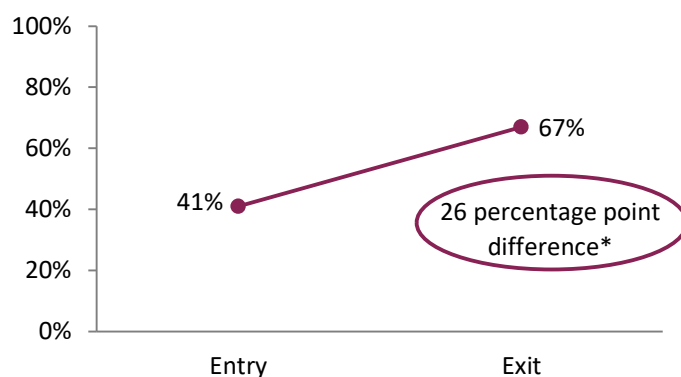

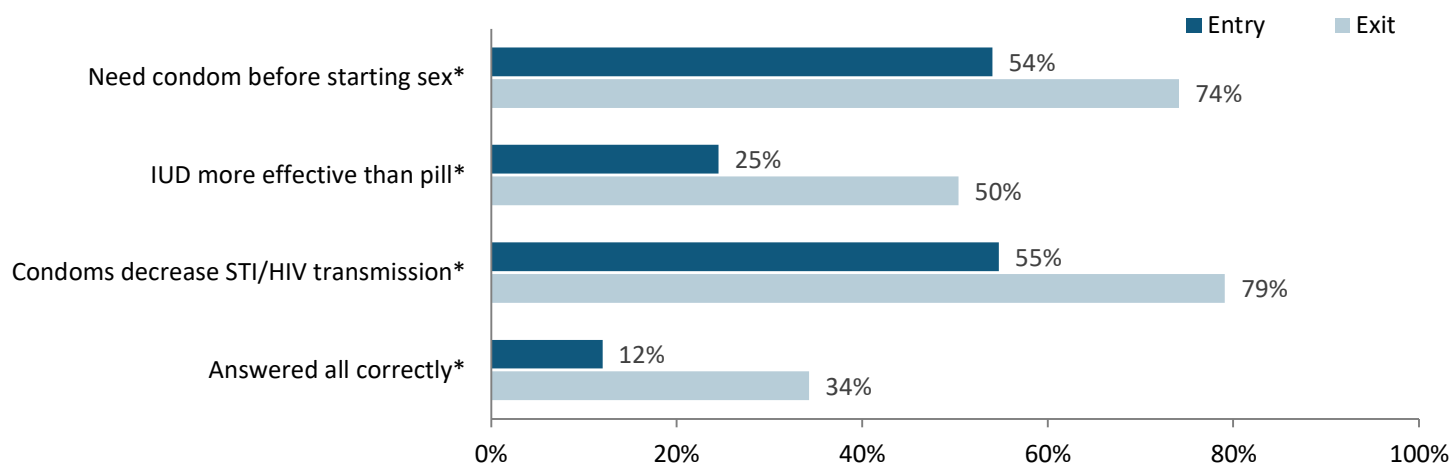

Figure 12. Percentage of participants who answered the knowledge questions correctly at entry and exit (n = 2,652)

Dashboard notes

- Figure 1** 840 participants were missing data for this question. Due to rounding, the percentages may not add up to 100% in pie charts.
- Figure 2** 1,339 participants were missing data for this question. Due to rounding, the percentages may not add up to 100% in pie charts.
- Figure 3** 48 participants were missing data for this question. Due to rounding, the percentages may not add up to 100% in pie charts.
- Figure 4** 179 participants were missing data for this question. Due to rounding, the percentages may not add up to 100% in pie charts.
- Figure 5** 163 participants were missing data for this question. Due to rounding, the percentages may not add up to 100% in the bar chart.
- Figure 6** 579 participants were missing data for this question. The All category includes females, males, those who reported other genders, and those who did not report their gender.
- Figure 7** 585 participants were missing data for these questions. This figure excludes those who have not had vaginal sex (n = 5,202).
- Figure 8** 707 participants were missing data for these questions. Among 5,202 participants who never had vaginal and/or anal sex, 8% accessed any SRH service.
- Figure 9** Number of participants missing data for these questions: 542-625.
- Figure 10** This figure excludes those who did not respond to the question (n = 561) and those who plan to abstain from sex in the next three months (n = 3,014). The All category includes females, males, other genders, and those who did not report their gender.
- Figure 11** Number of participants missing data for this question: 144 at entry; 69 at exit. An asterisk (*) indicates that difference between entry and exit surveys is statistically significant at $p < 0.05$.
- Figure 12** Number of participants missing data for these questions: 162-214 at entry; 91-137 at exit. An asterisk (*) indicates that difference between entry and exit surveys is statistically significant at $p < 0.05$.

General notes

Entry and exit data were reported by CA PREP participants. The data reflect online survey administration; a transition from paper survey administration took place during the Covid-19 pandemic. Pilot data from December 2020 (n = 36) is included in this dashboard.

Template and data were prepared by CDPH Maternal, Child and Adolescent Health (MCAH) Division and University of California, San Francisco, June 2023. CA PREP is funded by grant number 1401CAPREP from the Family & Youth Services Bureau.
