

Perinatal Equity Initiative (PEI) Planning Grant Funding Distribution

In addition to the base funding, all counties were allocated money based on a combination of the county population size and need. Population size was the number of live births to African-American mothers between 2014 and 2016¹. Need was defined based on two indicators:

- The percentage of preterm births (PTB), defined as the number of births delivered at less than 37 completed weeks of gestation (based on the obstetric estimate) per 100 total births among African-American mothers, 2014-2016¹.
- The infant mortality rate (IMR), defined as the number of infant (aged under 1 year) deaths per 1,000 live births among African-American mothers, 2011-2015².
