\* This table excludes Long-term and Rehabilitation Acute Care hospitals

a SIR is the standardized infection ratio of reported hospital CLABSI to the NHSN-predicted number of CLABSI adjusted for differences in incidence of CLABSI among the patient care locations. An SIR is produced by NHSN when at least one infection is predicted.

b If the 95% Confidence Interval (CI) for the SIR includes 1, the number of reported infections is not statistically significantly different from that predicted.

c Comparison indicates hospital-specific SIRs with observed numbers of infections that are statistically higher, lower, or no different than predicted number of infections.

¥ SIR was calculated by CDPH if the predicted number of infections was less than 1 but greater than or equal to 0.2. This SIR and its comparison are not as accurate as SIRs based on a larger number of predicted infections. For a detailed explanation, please see the Technical Notes.
