Communication in Skilled Nursing Facilities
Objectives

• Describe how to develop and communicate infection prevention plans and findings to facility leaders and staff

• Discuss effective processes for internal facility communication

• Review a communication tool for sharing information with health care providers

• Illustrate how to share infection information with external facility partners
IP Communication with Facility Leaders

- The IP communicates Infection Prevention information to facility leadership and committees
  - Annual risk assessment
  - Infection prevention plan – based on risk assessment
  - Surveillance information
    - Healthcare-acquired infections
    - Multidrug-resistant organism (MDRO) trends
    - Influenza vaccinations

The IPs ability to communicate this information to leadership may impact resources for infection prevention activities
IP Communication with Staff and other HCP

• Communicate adherence monitoring results
  • Hand hygiene
  • Contact precautions
  • Environmental cleaning
  • Blood glucose monitoring

• Communicate with physicians
  • HAI surveillance data and infection incidence

• Interfacility communication
  • Transferring/receiving residents with infection or colonization

The IPs ability to communicate this information may impact HCP readiness to adhere to infection prevention practices
Facility Risk Assessment

- The IP leads the facility to perform their annual facility risk assessment
- Risk assessment needed to guide the Infection Prevention Program
  - Understand risks
  - Establish goals and strategies
  - Develop surveillance plan
- Required by CMS and other accrediting agencies
Facility Risk Assessment Elements

- Resident infection risks
- Community infection risks
- Communicable disease rates
- Invasive devices used
  - Urinary catheters
  - Central lines
  - Ventilators
- Immunizations
- Hand hygiene adherence

- Facility preparedness
  - Readiness to respond
  - Potential emergent threats
  - Outbreaks
  - Utilities disruption
  - Environmental cleaning and disinfection adherence
  - Isolation practice adherence
## Sample Facility Risk Assessment - Refer to Handout

High score indicates higher potential risk. Decide as a team which scores are a priority for your Infection Prevention Plan.
Facility Infection Prevention Plan - 1

• The foundation for the Infection Prevention Program
  • There is no program without a plan!
• Complete the plan after risk assessment review
  • Analyze risk assessment elements and prioritize what you will work on this year in the plan
• Surveyors will ask to see the Infection Prevention Plan
Facility Infection Prevention Plan - 2

• Describe the process for reviewing and analyzing infection surveillance data
  • Use to prioritize infection prevention activities
• Include statement that plan utilizes evidence-based guidelines such as CDC, SHEA, APIC
• Describe goals, objectives & measures that will be used to analyze effectiveness of the program
• Describe resident and staff infection risks
  • Clarify how risks will be addressed or mitigated
Facility Infection Prevention Plan - 3

• Outline processes for reporting and communication
  • Management of infectious diseases
  • Coordination of outbreak response
  • Provide guidance for mandatory reporting to outside agencies
    • Local public health
    • CDPH Licensing and Certification
• Summarize plan to address educational needs
  • Nurses and facility staff
  • Residents and family
Presenting Facility Data

- **Process:** report adherence monitoring results
- **Outcomes:** Report how many infections
- Use simple graphs and tables to tell the story
Monitor Infections over Time

Symptomatic UTI Monthly Rates 2018

- UTI Rate per 1000 Resident Days
- New closed system catheters implemented (with Foley training)
- Facility UTI Rate

Note significant changes on graph to reflect variations in data
Monitor Use of Invasive Devices

Urinary Catheter Device Utilization Ratio
April 2017 - February 2018

Reducing device use reduces device-related infections!
Monitor device utilization
Monitor Adherence to Care Practices

Hand Hygiene 2018

% Adherence

Jan-18  Feb-18  Mar-18  Apr-18

Unit A  Unit B  Unit C

Feedback
Provide feedback to appropriate stakeholders

• **Leadership**
  • Informed leaders are able to plan for infection prevention resources

• **Healthcare providers**
  • Informed physicians/providers may improve adherence to prevention care practices

• **Frontline staff**
  • Informed staff members are prepared to change if they know how they are performing

**Capture attention with current infection surveillance information!**
Communication with Providers - SBAR

A framework for communicating a resident’s condition between members of the health care team

**S**ituation – Vital signs and what is new with the resident now?

**B**ackground – What other diagnosis or symptoms does the resident have?

**A**ssessment – Nursing assessment; does the resident meet infection criteria?

**R**equest – What would you like from the physician?
Situation

• What is the situation you are calling about?
  • Identify self, unit, patient, room number
  • Briefly state the problem, what is it, when it happened or started, and how severe

Example:

*Dr. Jones, this is Ms. Nurse calling from XYZ SNF. I have Mrs. Smith in room 217, a 77 year old woman who has fever of 101.2°, complaining of frequency and burning with urination. The fever began this morning; the frequency and burning began last evening. There is no change in her alert mental status.*
Background

- Pertinent background information related to the situation
- Could include the following:
  - Admitting diagnosis and date of admission
  - List of current medications, allergies, IV fluids, and labs
  - Most recent vital signs
  - Lab results (date and time test was done and results of previous tests)
  - Other clinical information

Example:
- She was admitted 2 days ago from ABC hospital
- Her admitting diagnosis is status post knee replacement
- Her urinary catheter was discontinued just before discharge
- Her hospital urinalysis from 4 days ago was normal
Assessment

• What is the nurse’s assessment of the situation?

Example:

I think she may have a UTI, possibly due to the urinary catheter
Recommendation

• What is the nurse’s recommendation or what does he/she want

Example:
• *I’d like to get a urinalysis and possibly a urine culture if indicated*
• *She may also need acetaminophen for the fever*
Sample UTI SBAR Tool

S Situation
I am contacting you about a suspected UTI for the above resident.
Vital Signs  BP _______ / _______  HR _______  Resp. rate _______  Temp. _______

B Background
Active diagnoses or other symptoms (especially, bladder, kidney/genitourinary conditions)
Specify _______________________

☐ No  ☐ Yes  The resident has an indwelling catheter
☐ No  ☐ Yes  Patient is on dialysis
☐ No  ☐ Yes  The resident is incontinent  If yes, new/worsening?  ☐ No  ☐ Yes
☐ No  ☐ Yes  Advance directives for limiting treatment related to antibiotics and/or hospitalizations
Specify _______________________

☐ No  ☐ Yes  Medication Allergies
Specify _______________________

☐ No  ☐ Yes  The resident is on Warfarin (Coumadin®)

AHRQ Suspected UTI SBAR
(www.ahrq.gov/NH-ASPGuide)
### Assessment Input (check all boxes that apply)

#### Resident WITH indwelling catheter

The criteria are met to initiate antibiotics if one of the below are selected

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>
| ☐ | ☐ | Fever of 100°F (38°C) or repeated temperatures of 99°F (37°C)*
| ☐ | ☐ | New back or flank pain
| ☐ | ☐ | Acute pain
| ☐ | ☐ | Rigors /shaking chills
| ☐ | ☐ | New dramatic change in mental status
| ☐ | ☐ | Hypotension (significant decrease in systolic blood pressure)

#### Resident WITHOUT indwelling catheter

Criteria are met if one of the three No Yes

- ☐ ☐ 1. Acute dysuria alone
- ☐ ☐ 2. Single temperature of 100°F (38°C) and at least one new or worsening of urgency
- ☐ ☐ 3. No fever, but two or more of the following:
  - urgency
  - frequency
  - back or flank pain

—or

- ☐ ☐ 1. Acute dysuria alone
- ☐ ☐ 2. Single temperature of 100°F (38°C) and at least one new or worsening of urgency
- ☐ ☐ 3. No fever, but two or more of the following:
  - urgency
  - frequency
  - back or flank pain

—or

- ☐ ☐ 1. Acute dysuria alone
- ☐ ☐ 2. Single temperature of 100°F (38°C) and at least one new or worsening of urgency
- ☐ ☐ 3. No fever, but two or more of the following:
  - urgency
  - frequency
  - back or flank pain

—or

- ☐ ☐ 1. Acute dysuria alone
- ☐ ☐ 2. Single temperature of 100°F (38°C) and at least one new or worsening of urgency
- ☐ ☐ 3. No fever, but two or more of the following:
  - urgency
  - frequency
  - back or flank pain
Facilities work together to protect patients.

**Common Approach (Not enough)**
- Patients can be transferred back and forth from facilities for treatment without all the communication and necessary infection control actions in place.

**Independent Efforts (Still not enough)**
- Some facilities work independently to enhance infection control but are not often alerted to antibiotic-resistant or *C. difficile* germs coming from other facilities or outbreaks in the area.
- Lack of shared information from other facilities means that necessary infection control actions are not always taken and germs are spread to other patients.

**Coordinated Approach (Needed)**
- Public health departments track and alert health care facilities to antibiotic-resistant or *C. difficile* germs coming from other facilities and outbreaks in the area.
- Facilities and public health authorities share information and implement shared infection control actions to stop spread of germs from facility to facility.

CDC Vital Signs, Making Health Care Safer
[cdc.gov/vitalsigns](http://cdc.gov/vitalsigns)
Inter-facility Communication

- Provides important information about a resident’s current clinical status
- Gives both the transferring and receiving facility a way to share the residents history of infection and vaccination
- Provides MDRO information to receiving facility so proper room placement or transmission precautions can be implemented
- Relays information about devices such as urinary catheters and central lines
- Ensures that a patient is safely transferred
HEALTHCARE-ASSOCIATED INFECTIONS PROGRAM

Interfacility Communication Transfer Tool – page 1

**INFECTION CONTROL TRANSFER FORM**

This form should be sent with the patient/resident upon transfer. It is NOT meant to be used as criteria for admission, only to foster the continuum of care once admission has been accepted.

- **Date:**

### Is the patient currently on antibiotics?
- **Yes**
- **No**

**Antibiotic:**

**Dose, Frequency:**

**Treatment for:**

**Start date:**

**Stop date:**

### Does the patient currently have any of the following devices?
- **Yes**
- **No**

- Central line/PICC, Date inserted:
- Suprapubic catheter
- Percutaneous gastrostomy tube
- Hemodialysis catheter
- Tracheostomy
- Urinary catheter, Date inserted:
- Fecal management system

### Were immunizations received at sending facility?
- **Yes**
- **No**

**If yes, specify:**

**Date(s):**
Summary

• Effective communication is key to preventing HAI
• Assess resident risk of infection and establish a plan with clear goals
• Regular feedback of adherence monitoring and HAI incidence data is necessary for providers and staff to improve infection prevention care practices
• Sharing information with internal and external partners will improve patient safety and prevent HAI across health care settings
