EXECUTIVE SUMMARY

Hospital-based health care personnel (HCP) who receive annual influenza vaccination make an important contribution to prevent transmission of influenza to patients, their families, and the community. The U.S. Advisory Committee on Immunization Practices recommends HCP receive the annual influenza vaccine [1]. Additionally, the Centers for Disease Control and Prevention recommends the influenza vaccine as the best way for HCP to protect against influenza infection and transmission [2].

California acute care hospitals must offer influenza vaccination at no cost to HCP, require HCP to receive the annual influenza vaccination or declare in writing that he/she declines vaccination, and report vaccination data to the California Department of Public Health (CDPH) (Health and Safety Code section 1288.7). CDPH is required to publish hospital influenza vaccination coverage no later than six months after receiving the data (Health and Safety Code

Figure 1. Hospital Health Care Personnel Influenza Vaccination Coverage by County, 2018-19

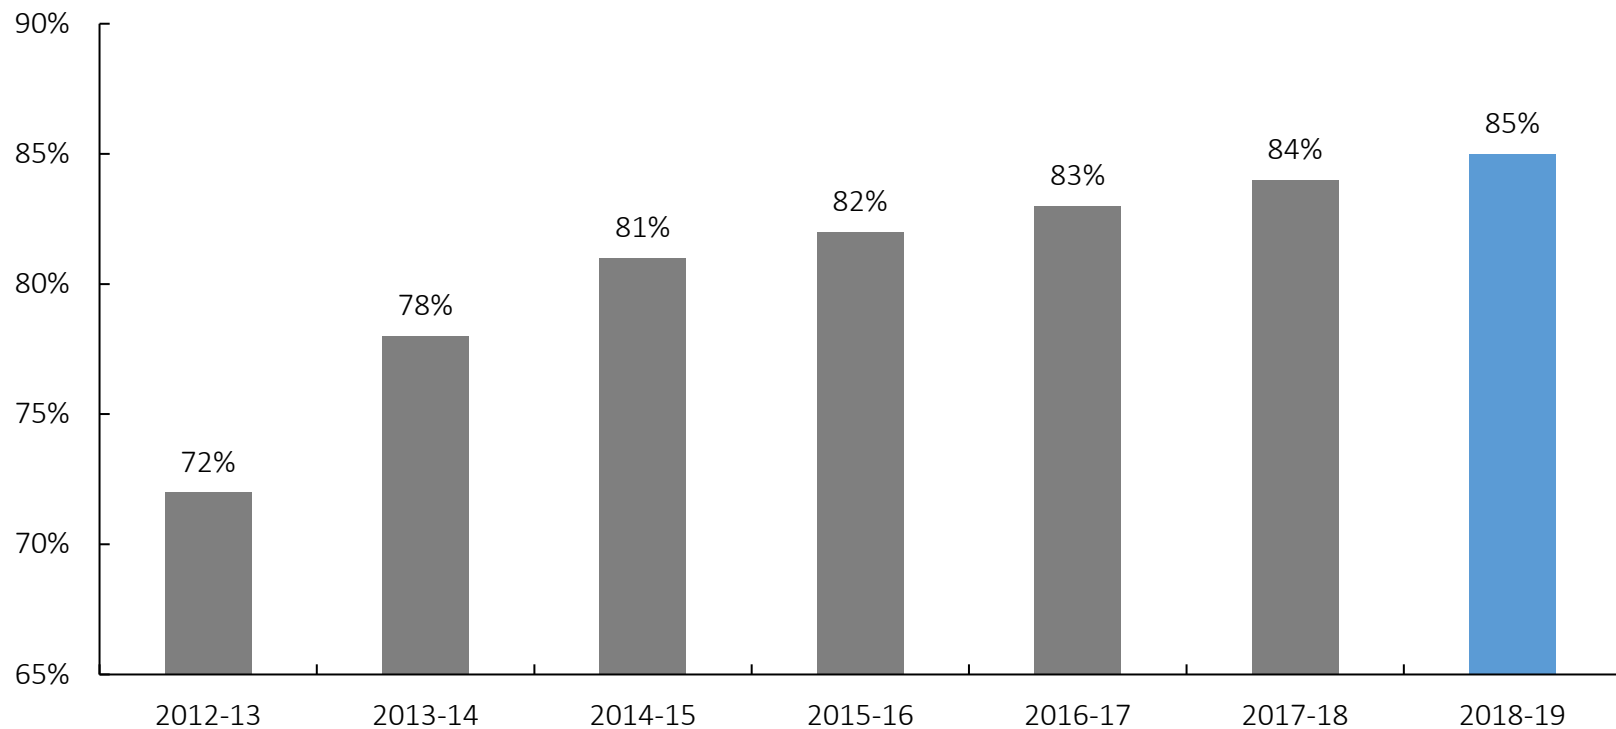

section 1288.8). This report presents data from 385 California hospitals for the 2018-19 influenza season (October 1, 2018, through March 31, 2019) and also summarizes vaccination coverage by county (Figure 1). To be considered on track to reach the Healthy People 2020 goal of 90% vaccinated, hospital HCP vaccination coverage should be at least 87% in 2018-19.

Overall, California hospitals reached 85% influenza vaccination among HCP in 2018-19 (Figure 2). Statewide vaccination must increase by 5% in the next influenza season to achieve the 2020 goal. In total, 191 (50%) hospitals are on track to achieve the 2020 goal, including 131 (34%) hospitals that have already achieved the 90% Healthy People 2020 goal.

CDPH encourages all persons 6 months of age or older to receive an annual flu vaccine unless they have certain medical conditions that prevent them from getting vaccinated. CDPH suggests members of the public use this report to view vaccination rates of their local hospitals and ask their doctors and other HCP about annual influenza vaccination.

Figure 2. Hospital Health Care Personnel Influenza Vaccination Coverage by Year

ANNUAL REPORT

BACKGROUND

Influenza occurs annually, causing serious consequences especially among high risk persons. Unvaccinated **health care personnel (HCP)** who are exposed to patients with influenza can serve as sources for transmitting influenza virus to other patients. Many hospitalized patients are at increased risk for influenza complications, such as persons 85 years or older who respond poorly to vaccination, immune-compromised patients and those with certain conditions, and young children [1].

Annual influenza vaccination is a simple and safe strategy for reducing the risk of transmitting influenza. HCP who receive annual influenza vaccination make an important contribution to influenza prevention in their hospitals and the community. A hospital's annual HCP influenza vaccination rate is a quality performance indicator of patient safety.

In 2015, the CDPH Healthcare-Associated Infections (HAI) Advisory Committee recommended that all California hospitals achieve the national Healthy People goal of 90% HCP influenza vaccination by 2020 [3]. To be on track to achieve the 2020 goal in 2018-19, hospitals should have achieved at least 87% vaccination coverage.

METHODS

This report presents data for the 2018-19 influenza season, October 1, 2018, through March 31, 2019. State law requires California acute care hospitals to offer influenza vaccination at no cost to HCP and requires HCP to receive the annual influenza vaccination or declare in writing that he/she declines vaccination (Health and Safety Code section 1288.7). Hospitals collect data for all HCP physically working in the facility for one or more days during influenza season.

Hospitals track HCP vaccination using the National Healthcare Safety Network (NHSN) protocols and report data using the NHSN secure, web-based system [4]. Hospitals provide rights to the California Department of Public Health (CDPH) to receive, analyze, and publish the data. CDPH is required to publish annual HCP vaccination rates within six months of receiving the data (Health and Safety Code section 1288.8). CDPH downloaded the data for this report on May 23, 2019.

The term HCP refers to all paid and unpaid persons working in health care settings who have the potential to be exposed to patients or infectious materials and have the potential to transmit influenza to and from patients and other HCP. HCP are direct care providers (e.g., physicians, nurses, nursing assistants, therapists, technicians, emergency medical service personnel, pharmacists, laboratory personnel) as well as persons not directly involved in patient care (e.g.,

clerical, dietary, housekeeping, laundry, security, maintenance, administrative, billing). HCP include employees paid by the health care facility and other professional, contract, and other staff not directly paid by the health care facility. CDPH reports data separately for hospital employees, licensed independent practitioners, contract personnel, and students, trainees, and volunteers.

In 2018-19, 385 (97%) of hospitals complied with influenza vaccination reporting requirements. The CDPH Licensing and Certification Program cites hospitals with incomplete reporting and requires a plan of correction to address the deficiency. Thirteen hospitals did not report influenza vaccination data in 2018-19 (Table 1).

Table 1. Hospitals that did not Report Influenza Vaccination Data, 2018-19

	Surprise Valley Community Hospital
San Bernardino	Totally Kids Rehabilitation Hospital
Shasta	Mayers Memorial Hospital
Trinity	Trinity Hospital

KEY FINDINGS

During the 2018-19 influenza season, approximately 948,639 HCP worked in California hospitals. Among these health care personnel, 807,962 (85%) received the influenza vaccine. Influenza vaccination among HCP in California hospitals has increased 1% per year since the 2014-15 influenza season

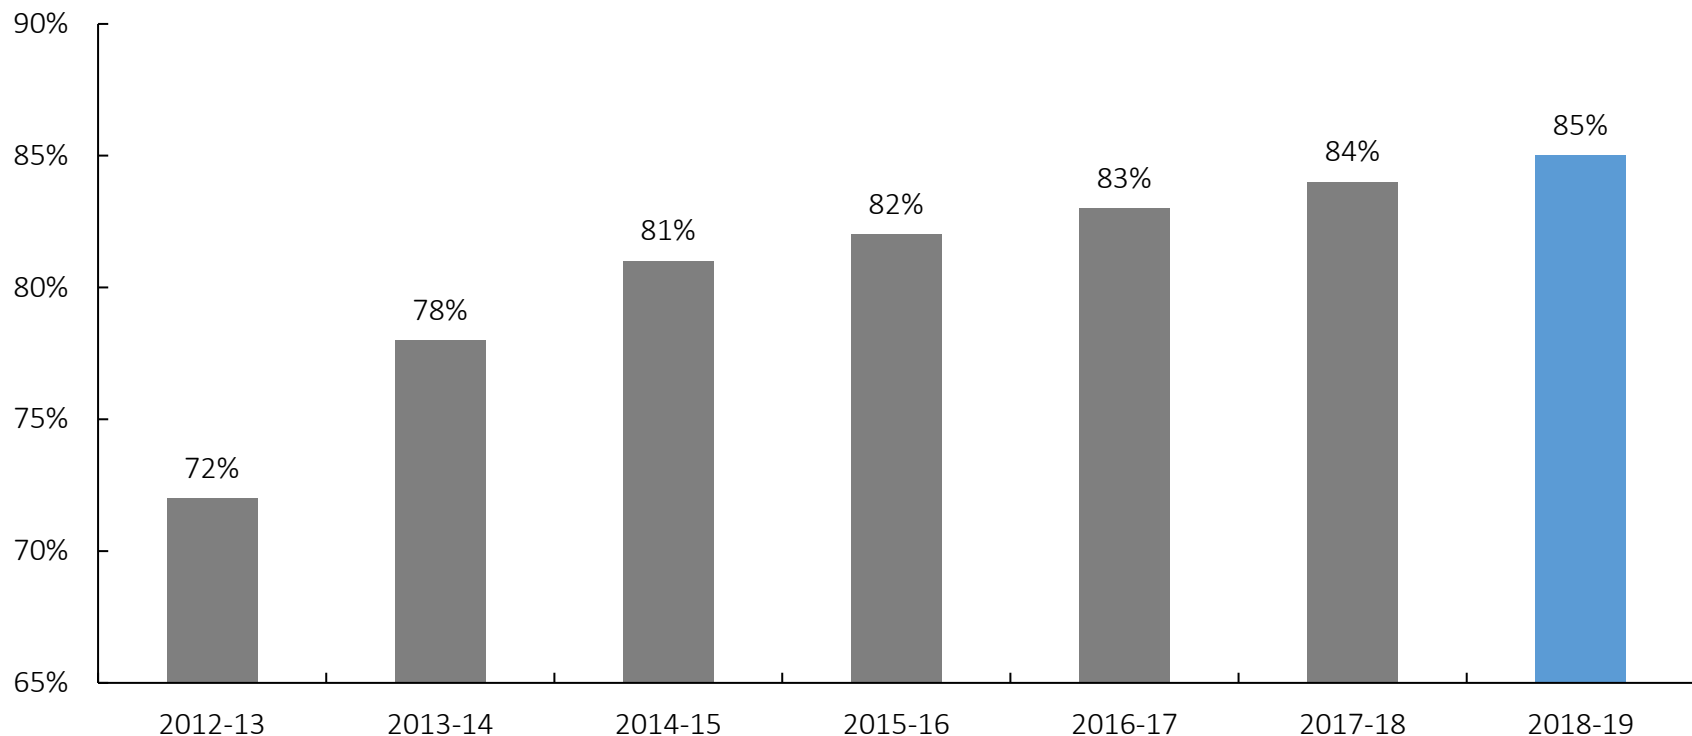

(Figure 2). To be on track to reach the Healthy People 2020 goal of 90% vaccinated, statewide vaccination among HCP must increase by 5% in the 2019-20 influenza season.

Overall, 191 (50%) hospitals are on track to achieve the 2020 goal, including 131

(34%) hospitals that have already achieved the 90% Healthy People 2020 goal (Table 2).

Five hospitals reported a declining vaccination rate of more than 20% between the 2017-18 and 2018-19 influenza seasons:

Figure 2. Hospital Health Care Personnel Influenza Vaccination Coverage by Year

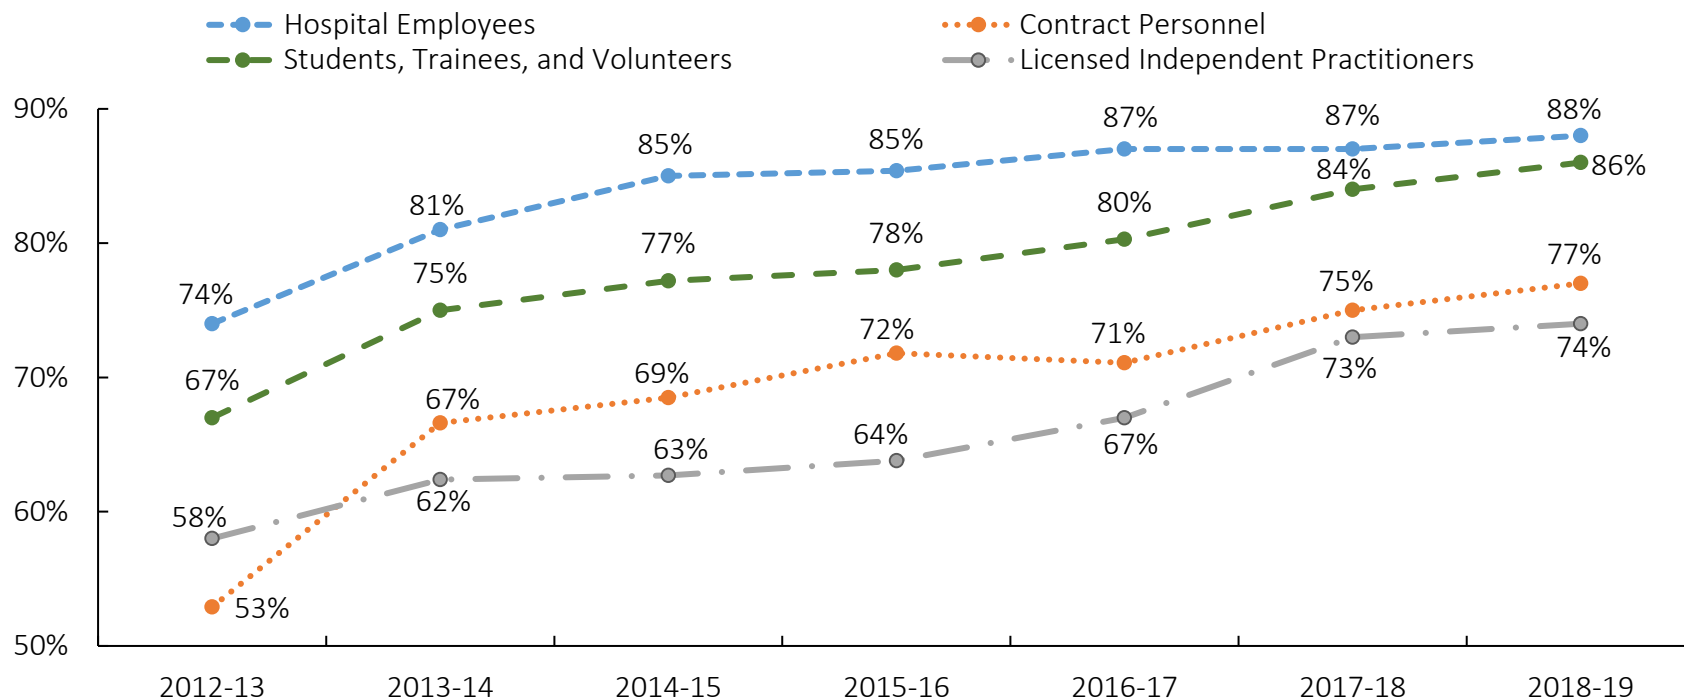

- Pacifica Hospital of the Valley (Los Angeles County)
- Coast Plaza Hospital (Los Angeles County)
- Adventist Health Ukiah Valley (Mendocino County)
- Adventist Health St. Helena (Napa County)
- Sonoma Developmental Center (Sonoma County)

Influenza Vaccination by HCP Category

In 2018-19, 88% of hospital employees received an influenza vaccine (Figure 3). Influenza vaccination coverage was highest among hospital employees for the seventh consecutive season, and hospital employees were the only HCP category on track in 2018-2019 to meet the 2020 Health People influenza vaccination goal (Figure 3).

Licensed independent practitioners and contract personnel had lowest influenza vaccination rates among the four HCP categories; neither group is on track to achieve the 2020 vaccination goal in 2018-19 (Figure 3). The category licensed independent practitioners, which has the lowest statewide vaccination rate for the seventh consecutive year among the four HCP categories, includes physicians,

Figure 3. Influenza Vaccination Coverage by Hospital Health Care Personnel Category, 2018-19

physician assistants, and advance practice nurses who do not receive paychecks directly from the hospital.

In 2018-19, 51 (13%) hospitals that reported data for all four HCP categories achieved the Healthy Peoples on-track target of 87% vaccination coverage among HCP. In addition, 31 (8%) hospitals reporting data for three

categories or less achieved the target goal for all categories reported.

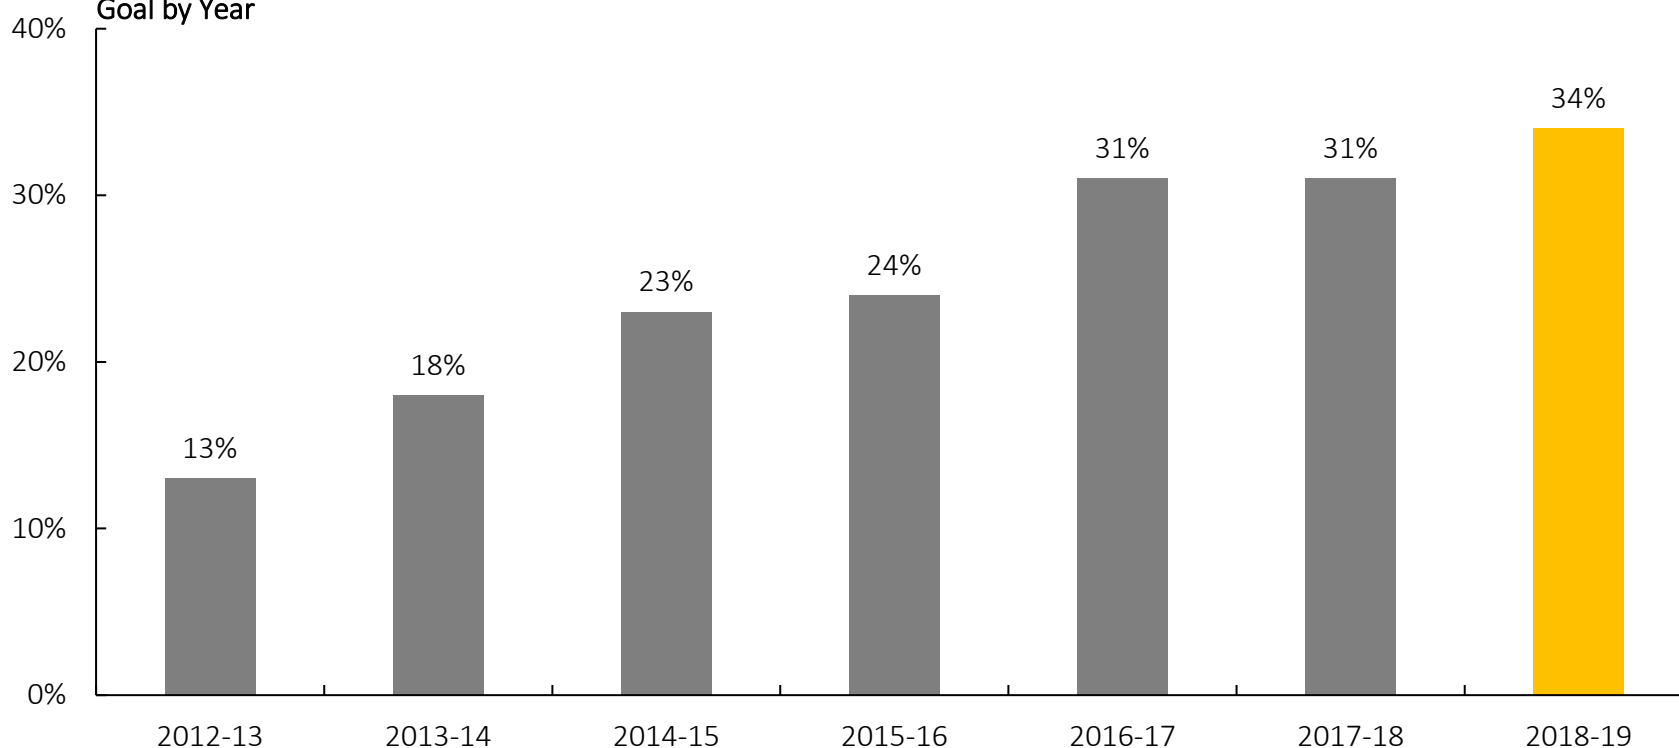

Influenza Vaccination by Healthy People 2020 Goal Achievement

In 2018-19, 131 (34%) hospitals already achieved the Healthy People 2020 goal of 90% HCP influenza vaccination, 3% more than the 2017-18 influenza season (Figure 4).

Influenza Vaccination by County

In 2018-19, 27 (52%) counties were on track toward the 2020 goal (Table 4). Forty-one local public health departments issued health orders for their jurisdictions that require HCP who decline vaccination to wear surgical masks during influenza season. Seventeen counties did not issue such health orders. Three counties, Alpine,

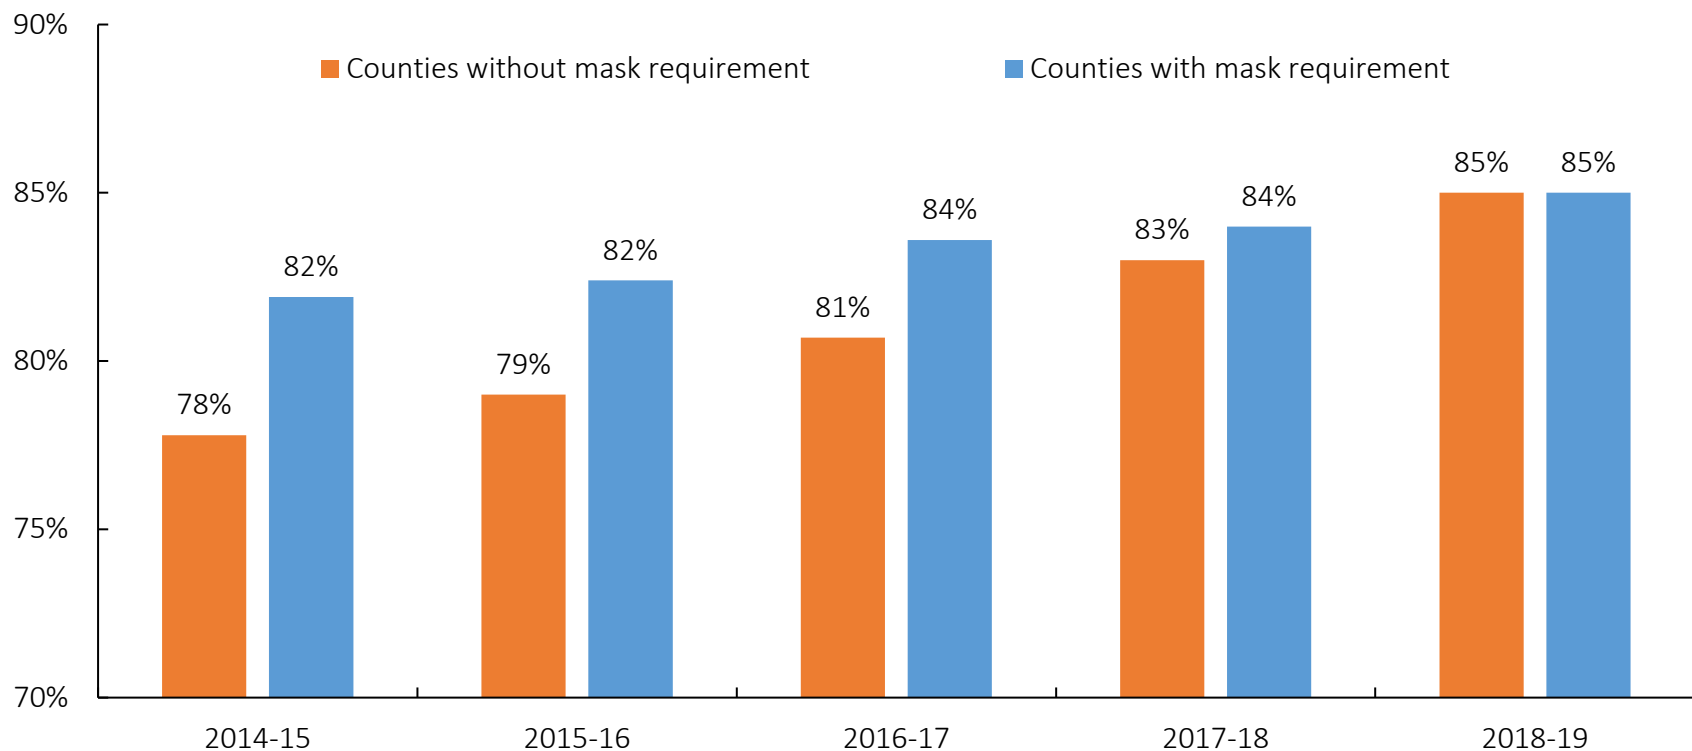

Figure 4. Percentage of California Hospitals that Achieved the Healthy People 2020 Influenza Vaccination Coverage Goal by Year

Colusa, and Sierra, are excluded due to having no hospital in operation during the 2018-19 influenza season.

Overall, hospital HCP vaccination rates are 85% in counties that require a mask for unvaccinated HCP as well as for counties that do not require masks (Figure 5).

Figure 5. Influenza Vaccination Coverage among Hospital Health Care Personnel by County Mask Requirement and Year

PUBLIC HEALTH RECOMMENDATIONS

CDPH recommends that all HCP receive annual influenza vaccination. In response to this report, CDPH will provide each local public health agency with a list of hospitals in their jurisdiction that have vaccination rates less than 87% and identify which hospitals should be targeted for local public health intervention.

To improve vaccination coverage in hospitals, CDPH recommends that hospitals:

- Review and provide feedback of vaccination rates to HCP throughout the influenza season

- Target HCP categories with the lowest vaccination rates

CDPH recommends that members of the public:

- Receive annual influenza vaccination if over 6 months of age and older
- If not sure a family member should be vaccinated due to medical conditions, check with your doctor or other HCP where you receive care
- Discuss the risk of influenza for themselves and their families with their doctor or other HCP

- Ask your doctor or anyone else providing care for you if he/she has received the annual influenza vaccination.
- When visiting a hospital or other health care facility when influenza is circulating in the community, follow instructions. You may be asked to cover your cough or wear a mask.
- Review the vaccination rates for HCP at your local hospitals in this written report or by viewing the CDPH interactive map (www.cdph.ca.gov/Programs/CHCQ/HAI/Pages/HCPFLUmap.aspx)
