

# Enhanced Standard Precautions (ESP) Pre/Post Test

1. What are the benefits of Enhanced Standard Precautions?
  - A. Improves resident interaction with others
  - B. Improves resident mental well-being
  - C. Improves resident and family satisfaction
  - D. Reduces healthcare provider PPE fatigue
  - E. Reduces the risk of spreading germs in the facility
  - F. All of the above
2. Who needs Enhanced Standard Precautions?
  - A. Residents with indwelling medical devices (e.g., urinary catheter, feeding tube, endotracheal or tracheostomy tube, vascular catheters)
  - B. Residents with wounds or presence of pressure ulcers (unhealed)
  - C. A & B
  - D. All residents
  - E. None of the above
3. When should healthcare personnel use gowns and gloves for residents on Enhanced Standard Precautions?
  - A. When providing morning and evening care
  - B. When assisting with toileting or changing incontinence briefs
  - C. When caring for devices or giving medical treatments
  - D. When performing wound care
  - E. When assisting with mobility or preparing to leave room
  - F. When cleaning and disinfecting the environment
  - G. All of the above
4. When using personal protective equipment (PPE), healthcare personnel should perform hand hygiene:
  - A. Before donning PPE
  - B. After PPE removal
  - C. Both A & B
  - D. None of the above because gloves are a substitute for performing hand hygiene

# Answer Key

## Enhanced Standard Precautions (ESP)

1. What are the benefits of Enhanced Standard Precautions?
  - A. Improves resident interaction with others
  - B. Improves resident mental well-being
  - C. Improves resident and family satisfaction
  - D. Reduces healthcare provider PPE fatigue
  - E. Reduces the risk of spreading germs in the facility
  - F. All of the above
2. Who needs Enhanced Standard Precautions?
  - A. Residents with indwelling medical devices (e.g., urinary catheter, feeding tube, endotracheal or tracheostomy tube, vascular catheters)
  - B. Residents with wounds or presence of pressure ulcers (unhealed)
  - C. A & B
  - D. All residents
  - E. None of the above
3. When should healthcare personnel use gowns and gloves for residents on Enhanced Standard Precautions?
  - A. When providing morning and evening care
  - B. When assisting with toileting or changing incontinence briefs
  - C. When caring for devices or giving medical treatments
  - D. When performing wound care
  - E. When assisting with mobility or preparing to leave room
  - F. When cleaning and disinfecting the environment
  - G. All of the above
4. When using personal protective equipment (PPE), healthcare personnel should perform hand hygiene:
  - A. Before donning PPE
  - B. After PPE removal
  - C. Both A & B
  - D. None of the above because gloves are a substitute for performing hand hygiene
