

California

is home to many kinds of **mosquitoes** and **ticks** that **bite** and

spread **disease.**

The **best** way to **protect yourself** is to use **insect repellent** when going outdoors.

**DON'T
GIVE BUGS
A BITING
CHANCE!**

Use insect repellent to keep bugs from biting!

Insect repellent registered by the Environmental Protection Agency (EPA) is **safe** to use as directed, and **it works** to prevent mosquito and tick bites.

Other repellents not registered by the EPA (like citronella candles and essential oils) have not been proven to prevent insect bites.

HOW TO CHOOSE:

Look for EPA-registered repellents that contain one of the following active ingredients:

- > **DEET**
- > **Para-menthane-diol (PMD)**
- > **Picaridin**
- > **Oil of Lemon Eucalyptus (OLE)***
- > **IR3535**

*Made from plants, but **not** the same as essential oil from eucalyptus

Choose repellents with a higher percentage of active ingredient (20-30%) if you will be outdoors for more than a few hours.
