Johnson & Johnson COVID-19 Vaccine: Some Frequently Asked Questions

**What is the Johnson & Johnson COVID-19 Vaccine?**

The Johnson & Johnson COVID-19 Vaccine is a single-dose vaccine that uses a modified adenovirus vector to deliver a genetic fragment of the SARS-CoV-2 virus (which causes COVID-19). It stimulates an immune response that helps protect against COVID-19.

**How does it work?**

The vaccine works by introducing a piece of genetic material from the SARS-CoV-2 virus into the body. This genetic material is designed to teach the immune system how to identify and fight off the virus without causing COVID-19 symptoms.

**Is it safe?**

Yes, the Johnson & Johnson COVID-19 Vaccine has been approved by regulatory authorities in many countries around the world, including the FDA in the United States, after rigorous testing and review.

**Who should get the Johnson & Johnson COVID-19 Vaccine?**

The Johnson & Johnson COVID-19 Vaccine is recommended for people 18 years of age and older. It is not recommended for people who are allergic to any of the vaccine's ingredients or who have had a severe reaction to a previous dose.

**How long does the vaccine protect?**

The Johnson & Johnson COVID-19 Vaccine is designed to provide long-term protection against COVID-19.

**Where can I find more information?**
