

# Human Papillomavirus (HPV)

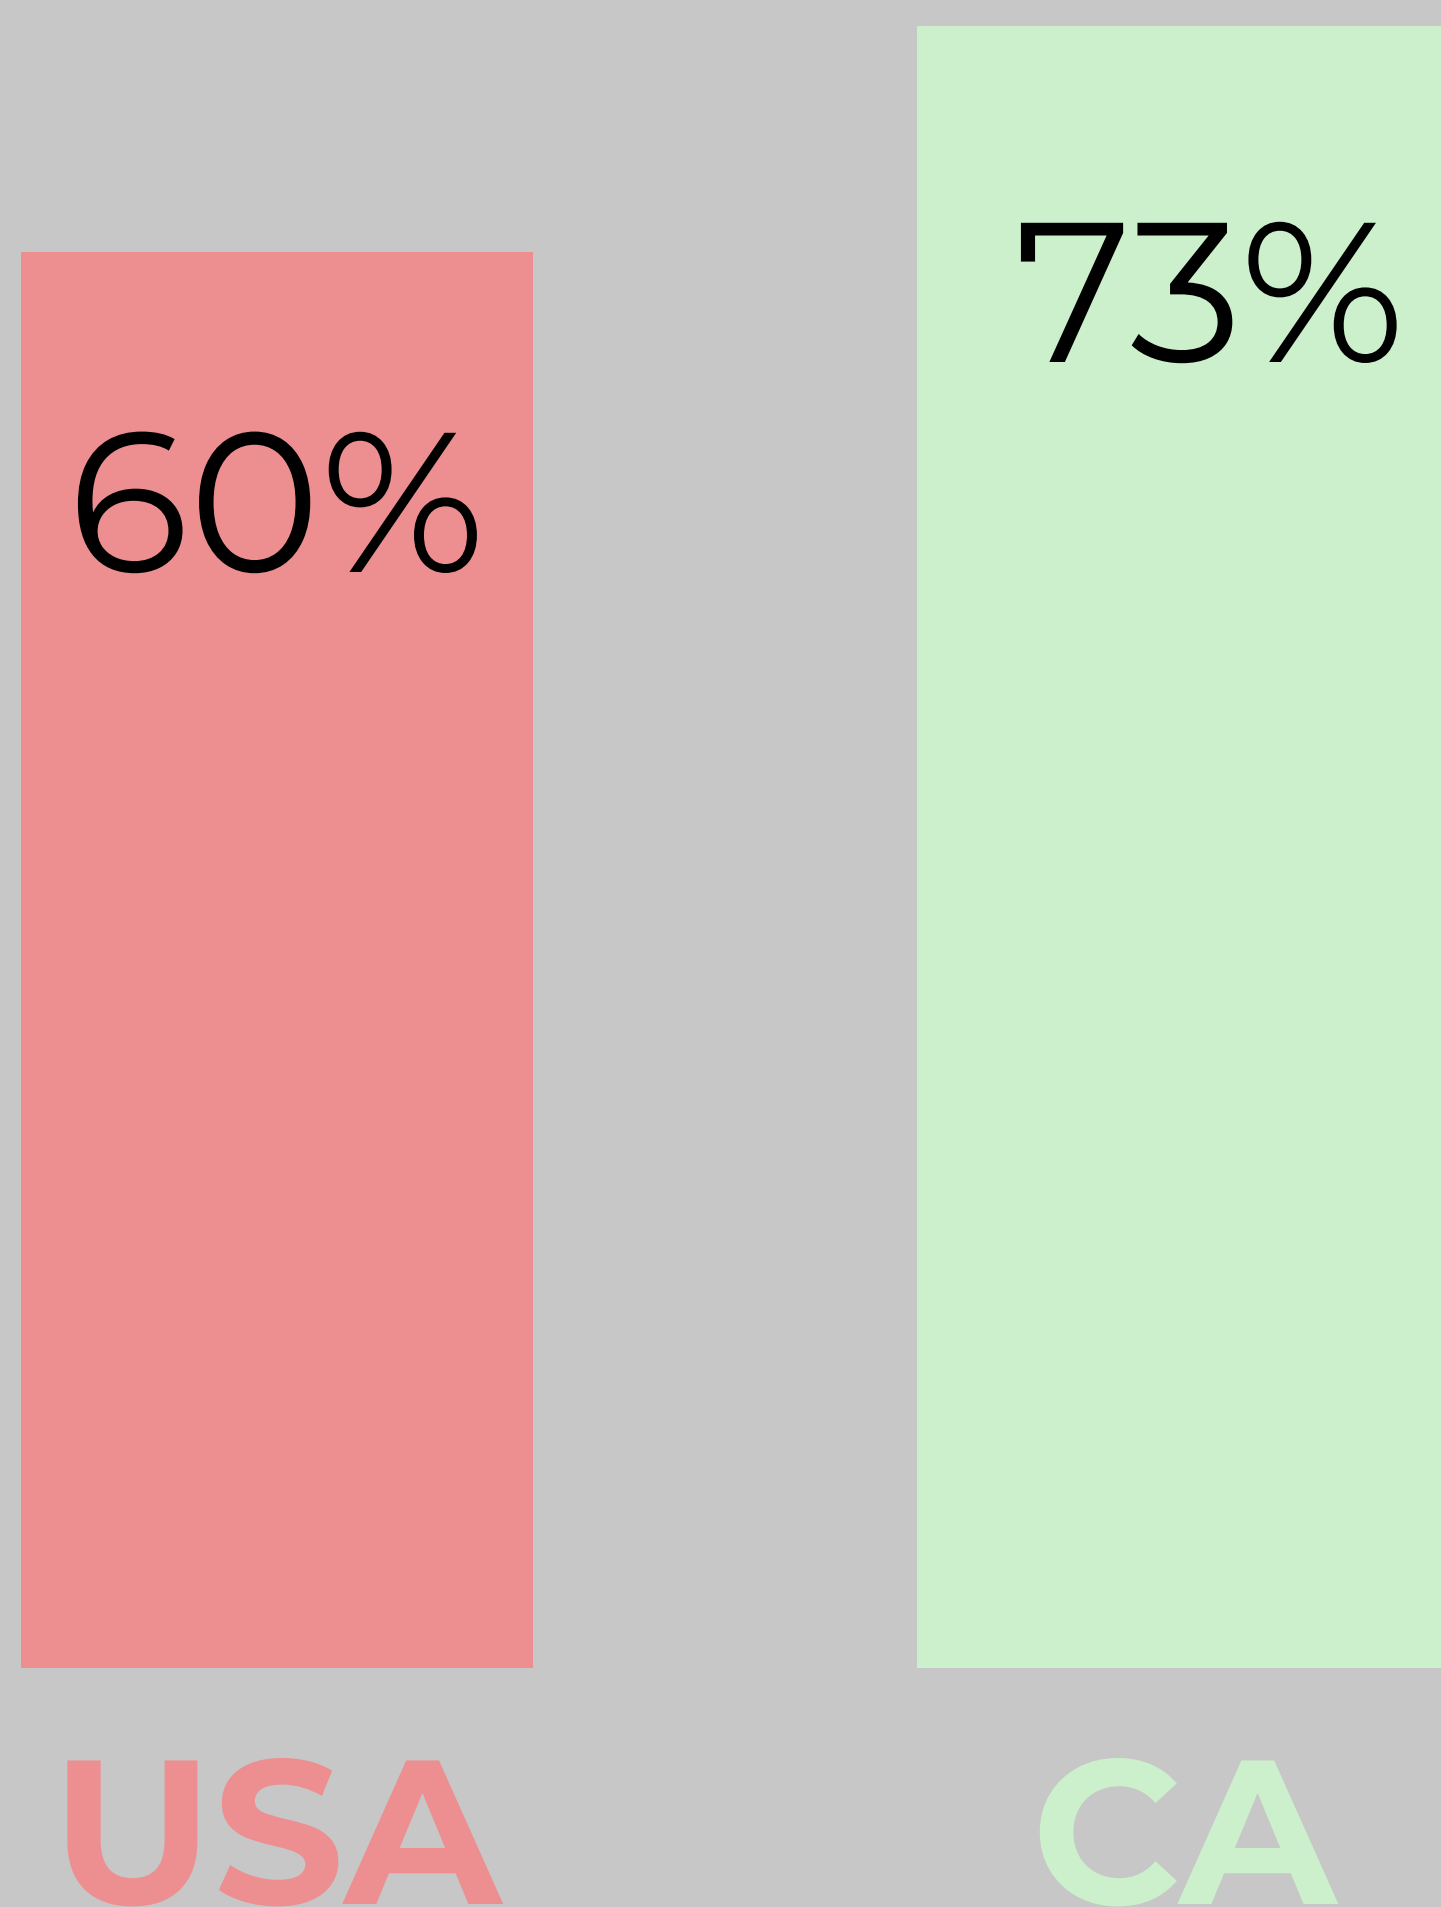

has more than 170 types

can lead to cancers of the cervix, vagina, penis, anus and throat

is the most common sexually transmitted infection

## California exceeds national average for adolescent HPV vaccine coverage

Percent of 13-17 year old boys & girls with  $\geq 1$  dose of HPV vaccine

[CDC NIS-Teen, 2016]

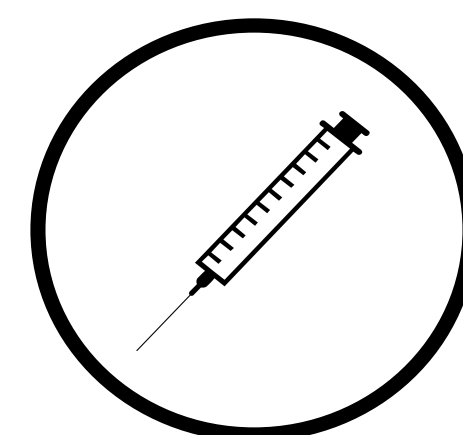

## Prevention is possible!

A safe and effective vaccine is available for:

### YOUTH 9-14

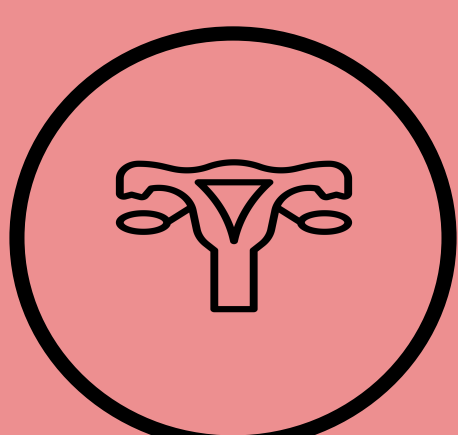

2 doses in 6-12 months

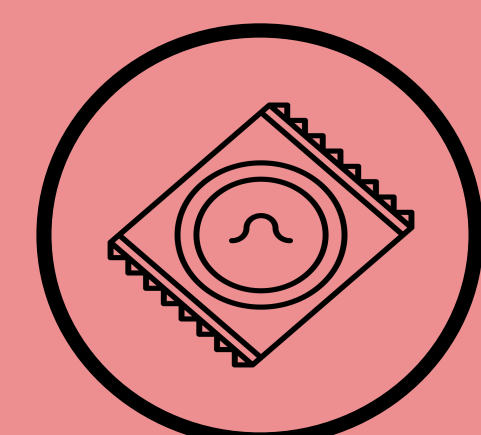

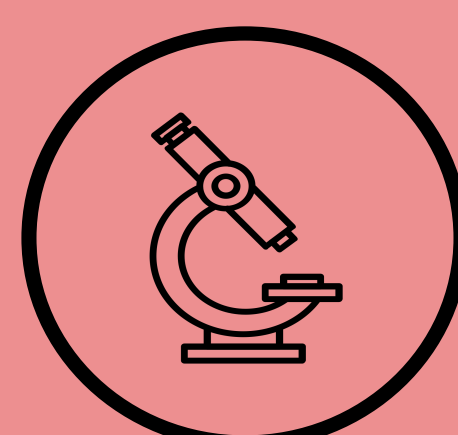

### YOUNG ADULTS 15-26

3 doses in 6 months

Routine cervical screening is recommended for women 21-65

Condoms also provide some protection against HPV

**Vaccinate. Screen. Educate. Protect.**
