 APPENDIX C – Local Primacy Agencies (Counties with delegated authority for small public water systems)	

**CALIFORNIA DEPARTMENT OF HEALTH SERVICES
DRINKING WATER PROGRAM
PUBLIC WATER SYSTEM ANNUAL COMPLIANCE REPORT**

(Calendar Year 2002)

SECTION I: Introduction

The Safe Drinking Water Act (SDWA) Amendments of 1996 included provisions requiring the States to complete an annual report on violations of national primary drinking water regulations by the public water systems in their state. This annual report must identify violations of primary drinking water standard maximum contaminant levels (MCL), treatment requirements, variances and exemptions, and significant monitoring requirements.

Public water systems served approximately 32.2 million people in California during the 2002 calendar year. Approximately 1.7 million people in California received their drinking water from other sources, primarily private wells serving individual residences.

The California Department of Health Services (Department) is designated by the United States Environmental Protection Agency (USEPA) as the primacy agency responsible for the administration and enforcement of the federal SDWA requirements in California. The State of California and the Department have adopted statutes and regulations to implement the requirements of the SDWA. The Department's regulatory responsibility over public water systems includes (1) issuance of operating permits, (2) conducting inspections, (3) monitoring for compliance with regulations, and (4) taking enforcement action to compel compliance when violations are identified.

The Department has delegated the drinking water program regulatory authority for small public water systems serving less than 200 service connections to thirty-five (35) counties in California. The delegated counties (or Local Primacy Agencies) are responsible for regulating approximately 5,000 small public water systems statewide. The Department retains the regulatory authority over all public water systems statewide with greater than 200 service connections and the small public water systems in the remaining twenty-three (23) non-delegated counties. A list of the delegated counties is included in Appendix C of this report.

The Department submits drinking water regulatory program data electronically to the USEPA for compilation in the federal Safe Drinking Water Information System (SDWIS) on a quarterly basis. The data submitted to SDWIS typically includes (1) public water systems inventory statistics, (2) MCL violations, Major Monitoring and Treatment Technique violations, (3) the enforcement actions taken by the Department against public water systems for violations, and (4) variances and exemptions. The USEPA regions also report federal enforcement actions into the SDWIS database.

During the calendar year 2002, the Department experienced technical problems in the electronic transmittal of water quality and violations data into the federal SDWIS. As a result, the information available from the federal SDWIS is considered incomplete and does not accurately reflect the status of drinking water compliance in the State of California. The Department is aggressively working with the USEPA to resolve the data transfer issues and problems to ensure the completeness and accuracy of the SDWIS data in the future. Consequently, the violations information included in this report is derived from the data available from the Department's independent drinking water program database system for the period of January 1, 2002 through December 31, 2002.

A copy of this report is available to the public by contacting the Department at (916) 323-6111. This report is also available on the Department's website at www.dhs.ca.gov/ps/ddwem/publications/pubindex.htm.

SECTION II: Primary Drinking Water Standards / Water Quality Monitoring

Primary drinking water standards have been adopted by the Department for contaminants that may be found in drinking water supplies in California. The standards are set at levels necessary to protect the public from acute and chronic health risks associated with consuming the contaminants in the drinking water supplies.

Public water systems are required to serve drinking water that meets all of the Department's drinking water standards, and to conduct routine sampling and analysis of their drinking water supplies to certify compliance. Further, all water quality analysis must be conducted by laboratories that are certified by the Department and the analytical results transmitted electronically to the Department. The water quality analytical results are reviewed and evaluated by the Department to determine compliance with drinking water standards. The Department identifies and reports violations when public water systems submit water quality analytical results that exceed the established drinking water standards.

Public water systems are required to notify the Department within forty-eight (48) hours of receiving water quality analytical results indicating a failure to meet any primary drinking water standard. In the case of a bacteriological or nitrate/nitrite drinking water standard violation, public water systems are required to notify the Department within twenty-four (24) hours of receiving water quality analytical results indicating an MCL has been exceeded.

A monitoring violation is reported when a public water system fails to conduct the required water quality sampling and analysis or to report the analytical results to the Department or the appropriate Local Primacy Agency.

SECTION III: Variances And Exemptions

The Department is authorized under the federal SDWA to issue variances and exemptions from meeting drinking water standards to public water systems under special circumstances.

A variance is allowed in situations where the characteristics of a raw water source make it impossible for a public water system to meet the MCL with the installation of the best available technology, treatment techniques, or other approved method. The approval of any variance must ensure adequate protection of human health. Additionally, the variance is reviewed by the Department not less than every five (5) years to determine whether continuation of the variance is appropriate and necessary.

An exemption from an MCL and/or treatment technique is allowed in situations where a public water system is in noncompliance as the result of compelling factors and the exemption will not result in an unreasonable risk to public health. Any public water systems that receive an exemption must achieve compliance with the MCL or treatment technique as expeditiously as practicable, but not later than three (3) years after the applicable compliance date.

The Department did not approve any variances or exemptions during calendar year 2002.

SECTION IV: Summary of Violations

This section identifies the categories of primary drinking water standards and summarizes the public water system violations data included in Appendix A. The identities of the public water systems in violation are included in Appendix B.

Organic Contaminants

Public water systems were required to conduct water quality monitoring for sixty-two (62) organic contaminants that are regulated by primary drinking water standards. Four (4) MCL violations and thirty-two (32) monitoring violations were reported by thirty-four (34) public water systems.

Inorganic Contaminants

Public water systems were required to conduct water quality monitoring for seventeen (17) inorganic contaminants that are regulated by primary drinking water standards. Eighty-seven (87) MCL violations and ninety (90) monitoring violations were reported by 151 public water systems.

Radionuclide Contaminants

Public water systems were required to conduct water quality monitoring for six (6) radionuclide contaminants regulated by primary drinking water standards. A single MCL violation and monitoring violation were reported by two (2) public water systems.

Total Trihalomethanes

Public water systems were required to conduct water quality monitoring for total trihalomethanes contaminants. Two (2) MCL violations were reported by one (1) public water system.

Total Coliform Rule

The Total Coliform Rule violations identify the presence of microbiological contamination in drinking water supplies. Public water systems are required to conduct water quality monitoring for coliform bacteria as the basis for establishing compliance with the drinking water bacteriological standard.

A total of 579 bacteriological MCL violations were reported by 453 public water systems. A total of forty (40) acute MCL violations were reported by thirty-two (32) public water systems, and 539 non-acute MCL violations were reported by 421 public water systems.

An acute MCL violation indicates that a public water system detected fecal coliform or E. coli bacteria in their drinking water supply. A non-acute MCL violation indicates that a public water system only detected total coliform bacteria in their drinking water supply.

There were also 922 significant monitoring and/or reporting violations reported by 622 public water systems. These violations were issued for failure to conduct the required bacteriological monitoring or required follow-up monitoring of their water systems or for not reporting analytical results to the Department.

Surface Water Treatment Rule

The Surface Water Treatment Rule establishes treatment techniques and performance standards for public water systems that use surface water as a drinking water source. These treatment techniques and performance standards are used instead of MCL's for microbiological contaminants that may be found in surface waters including Giardia lamblia, Cryptosporidium parvum, Legionella, heterotrophic plate count, and viruses.

Public water systems that use surface water are required to provide multi-barrier treatment to protect against adverse health effects from microbiological contaminants. All multi-barrier treatment systems must include the use of a filtration technology approved by the Department. Public water systems may be approved by the Department to use surface water without providing filtration under certain conditions and requirements. A water system that fails to meet these conditions and requirements is reported as a "failure to filter" violation.

For public water systems with approved filtration treatment, twenty-eight (28) public water systems reported a total of eighty-nine (89) treatment technique violations, and one (1) public water system reported two (2) significant monitoring violations.

For public water systems with approval to use surface water without filtration, five (5) public water systems reported a total of five (5) failure to filter violations, and two (2) public water systems reported one (1) significant monitoring violation each.

A monitoring violation is considered significant under the Surface Water Treatment Rule when fewer than ten percent (10%) of the required water samples are taken or the water quality monitoring results are not reported during the required reporting interval.

SECTION V: Conclusions

Overall, public water systems in California delivered drinking water that generally met all of the established state and federal drinking water standards and was safe to drink. A detailed breakdown of the violations and their health effect significance for each contaminant category is provided below.

Organic Contaminants

Violations of drinking water standards for organic contaminants by public water systems affected approximately 101 people in California (99.99% total compliance). Additionally, ten (10) public water systems that serve drinking water to approximately 618 people failed to conduct all of the required water quality monitoring and reporting for organic contaminants. The specific violations are as follows:

Methyl-tertiary-butyl-ether (MTBE) monitoring violations were reported by five (5) public water systems that serve approximately 488 people. The failure to complete the required contaminant monitoring prevented these public water systems from demonstrating compliance with the adopted drinking water standard.

A single public water system serving approximately 90 people, incurred a single monitoring violation for each of the following twenty-five (25) organic contaminants: 1,2,4-trichlorobenzene, Cis-1, 2-dichloroethylene, 1, 3-dichloropropene, trichlorofluoromethane, dichloromethane, xylene, 1, 2-dichlorobenzene, 1, 4-dichlorobenzene, vinyl chloride, 1, 1-dichloroethylene, 1, 1-dichloroethane, trans-1, 2-dichloroethylene, 1, 2-dichloroethane, 1, 1, 1-trichloroethane, carbon tetrachloride, 1, 2-dichloropropane, trichloroethylene, 1, 1, 2-trichloroethane, tetrachloroethylene, 1, 1, 2, 2-tetrachloroethane, monochlorobenzene, benzene, toluene, styrene, and ethylbenzene. The failure to complete the required contaminant monitoring prevented this public water system from demonstrating compliance with the adopted drinking water standards.

Dibromochloropropane MCL violations (greater than 0.0002 mg/l) were reported by three (3) public water systems that serve approximately 101 people. The consumption of drinking water with levels of dibromochloropropane exceeding the MCL over a long timeframe could increase the risk of cancer in humans.

One (1) public water system that serves approximately forty (40) people was cited for a dibromochloropropane monitoring violation. The failure to complete the required contaminant monitoring prevented this public water system from demonstrating compliance with the adopted drinking water standard.

Inorganic Contaminants

Violations of drinking water standards for inorganic contaminants by public water systems affected approximately 106,826 people in California (99.67% total compliance). Additionally, seventy-five (75) public water systems that serve approximately 137,446 people failed to conduct all of the required water quality monitoring and reporting for inorganic contaminants. The specific violations are as follows:

Aluminum monitoring violations were reported by two (2) public water systems that serve approximately 115 people. The failure to complete the required contaminant monitoring prevented these public water systems from demonstrating compliance with the adopted drinking water standard.

Arsenic MCL violations (greater than 0.05 mg/l) were reported by four (4) public water systems that serve approximately 499 people and a single record keeping violation was reported by one (1) public water system that serves approximately 625 people. Consuming drinking water with levels of arsenic exceeding the MCL over a long timeframe, could increase the risk of cancer or damage to the skin or circulatory system in humans.

A single barium MCL violation (greater than 1 mg/l) was reported by one (1) public water system that serves approximately 431 people. Consuming drinking water with levels of barium exceeding the MCL over a long timeframe, could increase the risk of damage to the heart and cardiovascular system and increase blood pressure in humans.

A single chromium MCL violation (greater than 0.05 mg/l) was reported by one (1) public water system that serves approximately twenty-five (25) people. Consuming drinking water with levels of chromium exceeding the MCL over a long timeframe, could increase the risk of damage to the kidneys, nervous system, or the circulatory system in humans.

A single fluoride MCL violation (greater than 2 mg/l) was reported by one (1) public water system that serves approximately 453 people and a single record keeping violation was reported by one (1) public water system that serves approximately 170 people. Consuming drinking water with levels of fluoride exceeding the MCL over a long timeframe, could increase the risk of bone disease or mottled teeth in humans.

Nitrate plus nitrite (sum as nitrogen) MCL violations (greater than 10.0 mg/l) were reported by five (5) public water systems that serve approximately 20,745 people and nitrate plus nitrite monitoring violations were reported by fourteen (14) public water systems that serve approximately 1,942 people. Consuming drinking water with levels of nitrate plus nitrite exceeding the MCL can cause serious illness and possible death in infants that are less than six (6) months of age.

Nitrate (NO₃) MCL violations (greater than 45.0 mg/l) were reported by fifty-four (54) public water systems that serve approximately 84,673 people and nitrate monitoring violations were reported by fifty-six (56) public water systems that serve approximately 134,504 people. Consuming drinking water with levels of nitrate exceeding the MCL can cause serious illness and possible death in infants that are less than six (6) months of age.

A single public water system serving approximately ninety (90) people was responsible for monitoring violations for arsenic, barium, cadmium, fluoride, mercury, nickel, nitrite, selenium, antimony, beryllium, and thallium. This public water system was also responsible for the twenty-five (25) organic contaminant monitoring violations identified on the previous page. The failure to complete the required contaminant monitoring prevented this public water system from demonstrating compliance with the adopted drinking water standards.

Radionuclides

Violations of drinking water standards for radionuclide contaminants by public water systems affected approximately 543 people in California. The specific violations are as follows:

A single combined radium-226 + radium-228 MCL violation (greater than 5 pCi/l) was reported by one (1) public water system that serves approximately 453 people. Consuming drinking water with levels of combined Radium-226 + Radium 228 exceeding the MCL over a long timeframe, could increase the risk of cancer in humans.

A single gross alpha monitoring violation was reported by one (1) public water system that serves approximately ninety (90) people. The failure to complete the required contaminant monitoring prevented this public water system from demonstrating compliance with the adopted drinking water standards.

Total Trihalomethanes

Violations of drinking water standards for total trihalomethane contaminants by public water systems affected approximately 16,800 people in California (99.95% total compliance). The specific violations are as follows:

A single total trihalomethanes MCL violation (greater than 0.1 mg/l) was reported by one (1) public water system that serves approximately 16,800 people. Consuming drinking water with levels of total trihalomethanes exceeding the MCL over a long timeframe, could increase the risk of liver, kidney, or central nervous system problems or increase the risk of cancer in humans.

Total Coliform Rule

Violations of bacteriological drinking water standards by public water systems affected approximately 871,832 people in California (97.29% total compliance). The specific violations are as follows:

Acute bacteriological MCL violations were reported by thirty-two (32) public water systems that serve approximately 5,001 people. Twenty-five (25) public water systems reported a single acute bacteriological MCL violation, which indicates that the circumstances causing the violations were corrected immediately.

Six (6) public water systems reported two (2) single consecutive bacteriological MCL violations, and one (1) public water system reported three (3) single consecutive bacteriological MCL violations. These violations indicate that the affected population was briefly exposed to a significant public health risk due to bacteriological contamination of their drinking water supplies.

Non-acute bacteriological MCL violations were reported by 421 public water systems that serve approximately 866,831 people. Typically, these non-acute bacteriological violations are the result of improper water sampling and/or inadequate cleaning of water distribution system pipelines.

Bacteriological monitoring violations were reported by 622 public water systems that serve approximately 140,375 people. The failure to complete the required bacteriological monitoring prevented these public water systems from demonstrating compliance with the primary drinking water standards for bacteriological quality.

Surface Water Treatment Rule

Approximately 99.98% of California's population served by public water systems that use surface water received drinking water that continuously satisfied the filtration treatment and monitoring provisions of the Surface Water Treatment Rule. The specific violations are as follows:

For public water systems with approved filtration treatment, twenty-eight (28) public water systems reporting treatment technique violations serve approximately 2,943 people. Fifteen (15) of these twenty-eight (28) public water systems reported the violation for only one (1) month, two (2) public water systems reported the violation for two (2) months, three (3) public water systems reported the violation for three (3) months, two (2) public water systems reported the violation for four (4) months, one (1) public water system reported the violation for five (5) months, one (1) public water system reported the violation for six (6) months, one (1) public water system reported the violation for seven (7) months, one (1) public water system reported the violation for eleven (11) months, and two (2) public water systems reported the violation for twelve (12) months. A single public water system reporting significant monitoring violations serves approximately 150 people.

For public water systems with approval to use surface water without filtration, five (5) public water systems reporting failure to filter violations serve approximately 1,659 people and two (2) public water systems reporting significant monitoring violations serve approximately 970 people.

The Surface Water Treatment Rule treatment technique violations are typically reported due to elevated turbidity levels in the water or a failure to maintain the required level of disinfection. High turbidity levels or inadequate disinfection are indicators of potential breakthrough of cryptosporidium, giardia, bacteria, or viruses in the treatment process which could create a public health risk.

Enforcement Activities

In response to the violations identified in this report, the Department issued a total of 2,382 enforcement letters, 389 citations, and 27 compliance orders to the affected public water systems. This aggressive enforcement action is a key element of the Department's overall regulatory strategy to bring all public water systems into full compliance with all of the drinking water standards and regulations and ensure that all Californians receive safe drinking water.

APPENDIX A

Summary of Public Water System Violations (By Contaminant)
