**CALIFORNIA DEPARTMENT OF HEALTH SERVICES
DRINKING WATER PROGRAM
PUBLIC WATER SYSTEM ANNUAL COMPLIANCE REPORT
(Calendar Year 2004)**

SECTION I: Introduction

The Safe Drinking Water Act (SDWA) Amendments of 1996 included provisions requiring the States to complete an annual report on violations of national primary drinking water regulations by the public water systems in their state. This annual report must identify violations of primary drinking water standard maximum contaminant levels (MCL), treatment requirements, variances and exemptions, and significant monitoring requirements.

Public water systems served approximately 34.7 million people in California during the 2004 calendar year. Approximately 1.8 million people in California received their drinking water from other sources, primarily private wells serving individual residences.

The California Department of Health Services (Department) is designated by the United States Environmental Protection Agency (USEPA) as the primacy agency responsible for the administration and enforcement of the federal SDWA requirements in California. The State of California and the Department have adopted statutes and regulations to implement the requirements of the SDWA. The Department's regulatory responsibility over public water systems includes (1) issuance of operating permits, (2) conducting inspections, (3) monitoring for compliance with regulations, and (4) taking enforcement action to compel compliance when violations are identified.

The Department has delegated the drinking water program regulatory authority for small public water systems serving less than 200 service connections to thirty-five (35) counties in California. The delegated counties (or Local Primacy Agencies) are responsible for regulating approximately 4,545 small public water systems statewide. The Department retains the regulatory authority over all public water systems statewide with 200 or more service connections and the small public water systems in the remaining twenty-three (23) non-delegated counties. A list of the delegated counties is included in Appendix C of this report.

The Department submits drinking water regulatory program data electronically to the USEPA for compilation in the federal Safe Drinking Water Information System (SDWIS) on a quarterly basis. The data submitted to SDWIS typically includes (1) Public Water Systems Inventory Statistics, (2) Maximum Contaminant Level (MCL) violations, (3)

Maximum Residual Disinfectant Level (MRDL) violations, (4) Major Monitoring and Treatment Technique violations, (5) the enforcement actions taken by the Department against public water systems for violations, and (6) Variances And Exemptions. The USEPA regions also report federal enforcement actions into the SDWIS database. During the calendar year 2004, the Department experienced technical problems in the electronic transmittal of water quality and violations data into the federal SDWIS. As a result, the information available from the federal SDWIS is considered incomplete and does not accurately reflect the status of drinking water compliance in the State of California. The Department is aggressively working with the USEPA to resolve the data transfer issues and problems to ensure the completeness and accuracy of the SDWIS data in the future. Consequently, the violations information included in this report is derived from the data available from the Department's independent drinking water program database system for the period of January 1, 2004 through December 31, 2004.

A copy of this report is available to the public by contacting the Department at (916) 449-5577. This report is also available on the Department's website at www.dhs.ca.gov/ps/ddwem/publications/pubindex.htm.

SECTION II: Primary Drinking Water Standards / Water Quality Monitoring

Primary drinking water standards have been adopted by the Department for contaminants that may be found in drinking water supplies in California. The standards are set at levels necessary to protect the public from acute and chronic health risks associated with consuming the contaminants in the drinking water supplies.

Public water systems are required to serve drinking water that meets all of the Department's drinking water standards, and to conduct routine sampling and analysis of their drinking water supplies to certify compliance. Further, all water quality analysis must be conducted by laboratories that are certified by the Department and the analytical results transmitted electronically to the Department. The water quality analytical results are reviewed and evaluated by the Department to determine compliance with drinking water standards. The Department identifies and reports violations when public water systems submit water quality analytical results that exceed the established drinking water standards.

Public water systems are required to notify the Department within forty-eight (48) hours of receiving water quality analytical results indicating a failure to meet any primary drinking water standard. In the case of a bacteriological or nitrate/nitrite drinking water standard violation, public water systems are required to notify the Department within twenty-four (24) hours of receiving water quality analytical results indicating an MCL has been exceeded.

A monitoring violation is reported when a public water system fails to conduct the required water quality sampling and analysis or to report the analytical results to the Department or the appropriate Local Primacy Agency.

SECTION III: Variances And Exemptions

The Department is authorized under the federal SDWA to issue variances and exemptions from meeting drinking water standards to public water systems under special circumstances.

A variance is allowed in situations where the characteristics of a raw water source make it impossible for a public water system to meet the MCL with the installation of the best available technology, treatment techniques, or other approved method. The approval of any variance must ensure adequate protection of human health. Additionally, the variance is reviewed by the Department not less than every five (5) years to determine whether continuation of the variance is appropriate and necessary.

An exemption from an MCL and/or treatment technique is allowed in situations where a public water system is in noncompliance as the result of compelling factors and the exemption will not result in an unreasonable risk to public health. Any public water systems that receive an exemption must achieve compliance with the MCL or treatment technique as expeditiously as practicable, but not later than three (3) years after the applicable compliance date.

During calendar year 2004, the Department did not approve any variances or exemptions.

SECTION IV: Summary of Violations

This section identifies the categories of primary drinking water standards and summarizes the public water system violations data for calendar year 2004 included in Appendix A. The identities of the public water systems in violation are included in Appendix B.

Organic Contaminants

Public water systems are required to meet primary drinking water standards and monitoring requirements for fifty-nine (59) organic contaminants. Two (2) MCL violations and 116 monitoring violations were incurred by eight (8) public water systems.

Inorganic Contaminants

Public water systems were required to meet primary drinking water standards and monitoring requirements for seventeen (17) inorganic contaminants. Eighty-nine (89) MCL violations and seventy-six (76) monitoring violations were incurred by ninety-four (94) public water systems.

Radionuclide Contaminants

Public water systems were required to meet primary drinking water standards and monitoring requirements for six (6) radionuclide contaminants. A total of six (6) MCL violations were incurred by five (5) public water systems and a total of twelve (12) monitoring violations were incurred by five (5) public water systems.

Disinfection Byproducts

Public water systems are required to meet primary drinking water standards and monitoring requirements for eight (8) disinfection byproduct contaminants that are formed when a chemical disinfectant is added to the drinking water. A total of thirteen (13) MCL violations were incurred by nine (9) public water systems, a total of seventy-four (74) monitoring violations were incurred by fifty-four (54) public water systems, and a total of five (5) treatment technique violations were incurred by five (5) public water systems.

Total Coliform Rule

The Total Coliform Rule violations identify the presence of microbiological contamination in drinking water supplies or failure of a PWS to conduct the required water quality monitoring for coliform bacteria, which is the basis for establishing compliance with the drinking water bacteriological standard.

A total of fifty-eight (58) acute violations were incurred by fifty-three (53) public water systems and 505 non-acute violations were incurred by 399 public water systems.

An acute violation indicates that a public water system detected fecal coliform or E. coli bacteria in their drinking water supply. A non-acute (monthly) violation indicates that a public water system detected total coliform bacteria in five percent (5%) of the water samples analyzed in a month in their drinking water supply.

There were also 799 significant monitoring and/or reporting violations incurred by 582 public water systems. These violations were issued for failure to conduct the required bacteriological monitoring for coliform bacteria or required follow-up monitoring of their water systems or failure to contact the Department.

Surface Water Treatment

The Surface Water Treatment and Enhanced Surface Water Treatment Rules establish monitoring requirements, treatment techniques, performance standards, and an MCL for turbidity for public water systems that use surface water as a drinking water source. A monitoring violation is considered significant under the Surface Water Treatment Rule when fewer than ten percent (10%) of the required water samples are taken or the water quality monitoring results are not reported during the required reporting interval. Treatment techniques and performance standards are used to establish water quality objectives instead of MCL's for microbiological contaminants that may be found in surface waters including *Giardia lamblia*, *Cryptosporidium parvum*, Legionella, heterotrophic plate count, and viruses.

Public water systems that use surface water are required to provide multi-barrier treatment to protect against adverse health effects from microbiological contaminants. All multi-barrier treatment systems must include the use of a filtration technology approved by the Department. Public water systems may be approved by the Department to use surface water without providing filtration under certain conditions and requirements. A "failure to filter" violation occurs when a water system fails to install filtration within eighteen (18) months of being notified that it has not met the conditions and requirements for filtration avoidance.

For public water systems with approved filtration treatment systems, twenty-seven (27) public water systems incurred a total of thirty-eight (38) treatment technique violations, and nine (9) public water systems incurred thirteen (13) significant monitoring violations.

For public water systems with approval to use surface water without filtration, two (2) public water systems incurred a total of two (2) significant monitoring violations, and one (1) public water system incurred one (1) MCL violation.

Consumer Confidence Report

The Consumer Confidence Report (CCR) is an annual water quality report that is delivered to each drinking water customer and includes information on the source of drinking water, the levels of any detected contaminants, and compliance with drinking water regulations.

A total of 168 consumer notification violations were incurred by 168 public water systems.

SECTION V: Conclusions

Overall, public water systems in California delivered drinking water that generally met all of the established state and federal drinking water standards and was safe to drink. A detailed breakdown of the violations and their health effect significance for each contaminant category is provided below.

Organic Contaminants

Violations of drinking water standards for organic contaminants by public water systems affected approximately 103,790 people in California (99.70% total compliance). Additionally, public water systems that serve drinking water to approximately 1,898 people failed to conduct all of the required water quality monitoring and reporting for organic contaminants. The specific MCL violations are as follows:

MTBE MCL violations (greater than 0.013 mg/l) were incurred by two (2) public water systems that serve approximately 103,790 people. The consumption of drinking water with levels of MTBE exceeding the MCL over a long time frame could increase the risk of cancer in humans.

Inorganic Contaminants

Violations of drinking water standards for inorganic contaminants by public water systems affected approximately 26,799 people in California (99.92% total compliance). Additionally, public water systems that serve approximately 226,441 people failed to conduct all of the required water quality monitoring and reporting for inorganic contaminants. The specific MCL violations are as follows:

A single aluminum MCL violation (greater than 1 mg/l) was incurred by a single public water system that serves approximately 150 people. Consuming drinking water with levels of aluminum exceeding the MCL over a long time frame, could increase the risk of short-term gastrointestinal effects in humans.

Arsenic MCL violations (greater than 0.05 mg/l) were incurred by five (5) public water systems that serve approximately 1,428 people. Consuming drinking water with levels of arsenic exceeding the MCL over a long time frame, could increase the risk of cancer or damage to the skin or circulatory system in humans.

Cadmium MCL violations (greater than 0.005 mg/l) were incurred by two (2) public water systems that serve approximately 337 people. Consuming drinking water with levels of cadmium exceeding the MCL over a long time frame, could increase the risk of damage to the kidney in humans.

Fluoride MCL violations (greater than 2 mg/l) were incurred by two (2) public water systems that serve approximately 151 people. Consuming drinking water with levels of fluoride exceeding 4 mg/l over many years may increase the risk of bone disease, including pain and tenderness of the bones. Children who consume drinking water with levels of fluoride exceeding 2 mg/l may increase the risk of mottled teeth.

Nitrate (NO₃) MCL violations (greater than 45 mg/l) were incurred by forty-one (41) public water systems that serve approximately 24,733 people. Consuming drinking water with levels of nitrate exceeding the MCL can cause serious illness and possible death in infants that are less than six (6) months of age.

Radionuclides

Violations of drinking water standards for radionuclide contaminants by public water systems affected approximately 67,096 people in California (99.81% total compliance). Additionally, public water systems that serve approximately 62,371 people failed to conduct all of the required water quality monitoring and reporting for radioactive contaminants. The specific MCL violations are as follows:

Uranium MCL violations (greater than 20 pCi/l) were incurred by five (5) public water systems that serve approximately 67,096 people. Consuming drinking water with levels of uranium exceeding the MCL over a long time frame, could increase the risk of damage to the kidney or the risk of cancer in humans.

Disinfection Byproducts

Violations of drinking water standards for disinfection byproduct contaminants by public water systems affected approximately 21,268 people in California (99.94% total compliance) and public water systems that serve approximately 543,295 people failed to conduct all of the required water quality monitoring and reporting for disinfection byproduct contaminants. Additionally, public water systems that serve approximately 16,073 people failed to provide the required treatment technique following laboratory results that indicated a high concentration of total organic carbon in the source water. The specific MCL and Treatment Technique violations are as follows:

Total trihalomethanes MCL violations (greater than 0.1 mg/l) were incurred by seven (7) public water systems that serve approximately 18,668 people. Consuming drinking water with levels of total trihalomethanes exceeding the MCL over a long time frame, could increase the risk of liver, kidney, or central nervous system problems or increase the risk of cancer in humans.

Haloacetic acids MCL violations (greater than 0.06 mg/l) were incurred by three (3) public water systems that serve approximately 3,480 people. Consuming drinking water with levels of haloacetic acids exceeding the MCL over a long time frame, could increase the risk of cancer in humans.

Total organic carbon Treatment Technique violations were incurred by five (5) public water systems that serve approximately 16,073 people. Drinking water supplies with high levels of total organic carbon are susceptible to increased levels of disinfection byproducts.

Total Coliform Rule

Violations of bacteriological drinking water standards by public water systems affected approximately 1,794,033 people in California (94.83% total compliance). Additionally, public water systems that serve approximately 153,077 people failed to conduct all of the required water quality monitoring and reporting for bacteriological contaminants. The specific acute and non-acute violations are as follows:

Acute bacteriological violations were incurred by fifty-three (53) public water systems that serve approximately 1,287,530 people. Forty-nine (49) public water systems incurred a single acute bacteriological MCL violation, which indicates that the circumstances causing the bacteriological contamination of their drinking water supplies were corrected immediately.

In addition, three (3) public water systems and one (1) public water system each incurred two (2) single and three (3) single consecutive acute bacteriological violations respectively. These violations indicate that the affected population was briefly exposed to a significant public health risk due to bacteriological contamination of their drinking water supplies.

Non-acute (monthly) bacteriological violations were incurred by 399 public water systems that serve approximately 506,427 people. Typically, these non-acute (monthly) bacteriological violations are the result of improper water sampling and/or inadequate cleaning of water distribution system pipelines.

Surface Water Treatment

Approximately 88.89% of California's population served by public water systems that use surface water received drinking water that continuously satisfied the filtration treatment and monitoring provisions of the Surface Water Treatment Rule and the Enhanced Surface Water Treatment Rule. The specific violations are as follows:

For public water systems with approved filtration treatment, treatment technique violations were incurred by twenty-seven (27) public water systems that serve approximately 3,847,785 people. Seven (7) of these twenty-seven (27) public water systems incurred the violation for two (2) months and twenty (20) public water systems incurred the violation for one (1) month. Additionally, significant monitoring violations were incurred by nine (9) public water systems that serve approximately 7,412 people.

For public water systems with approval to use surface water without filtration, MCI violations for turbidity were incurred by one (1) public water system that serves

approximately 40 people and significant monitoring violations were incurred by two (2) public water systems that serve approximately 425 people.

Treatment technique violations under the Surface Water Treatment Rule and the Enhanced Surface Water Treatment Rule are typically incurred due to elevated turbidity levels in the water or a failure to maintain the required level of disinfection. High turbidity levels or inadequate disinfection are indicators of potential breakthrough of cryptosporidium, giardia, bacteria, or viruses in the treatment process, which could create a public health risk.

Consumer Confidence Report

Consumer Confidence Report violations were incurred by 168 public water systems that serve approximately 38,437 people.

Enforcement Activities

In response to the violations identified in this report, the Department issued a total of 969 enforcement letters, 247 citations, and 20 compliance orders to the affected public water systems. This aggressive enforcement action is a key element of the Department's overall regulatory strategy to bring all public water systems into full compliance with all of the drinking water standards and regulations and ensure that all Californians receive safe drinking water.

The Department's enforcement actions against a public water system that violates a primary drinking water standard will vary according to the type of contaminant and the specific health risk from exposure to the contaminant in the drinking water.

Typically, the Department will require a public water system to immediately perform one or more of the following items depending upon the severity of the public health risk:

- Cease operation of the water system and provide an alternate source of safe drinking water.
- Shutdown or abandon the contaminated drinking water source.
- Conduct additional water quality monitoring to identify the cause and extent of the contamination and take appropriate corrective action.
- Modify the water treatment processes to eliminate the contamination.
- Provide notification of the drinking water contamination to water consumers and identify the potential health risks.
- Issue a "Boil Water Notice" (for bacteriological contamination) or "Do Not Drink Notice" (for contamination by other regulated contaminants).

For treatment technique and monitoring violations, the Department will require the public water system to conduct the required contaminant monitoring program and/or provide the appropriate water treatment.

Additional enforcement actions available to the Department include revoking or suspending a public water system's operating permit, assessing civil penalties up to \$25,000 per day for each day a drinking water standard violation occurs, or placing a public water system into receivership.

APPENDIX A

Summary of Public Water System Violations (By Contaminant)
