| | <p>The following reflects the findings of the CALIFORNIA DEPARTMENT OF PUBLIC HEALTH during an Entity Reported Incident visit.</p> <p>Representing the Department of Public Health: [REDACTED] HFEN.</p> <p>Inspection is limited to the specific entity reported incident investigated and does not represent the findings of a full inspection of the facility.</p> <p>INCIDENT/COMPLAINT CA00171025</p> <p>70223(b)(2) Surgical Service General Requirements</p> <p>(b) A committee of the medical staff shall be assigned responsibility for: (2) Development, maintenance and implementation of written policies and procedures in consultation with other appropriate health professionals and administration. Policies shall be approved by the governing body. Procedures shall be approved by the administration and medical staff where such is appropriate.</p> <p>Based on record review, policy and procedure review, and staff interview, the hospital failed to ensure that the Surgical Service nursing staff implemented the policy and procedure titled "Sponge, Towel, Needle, and Instrument Counts," resulting in a surgical lap sponge being left in Patient G's abdominal cavity following surgery.</p> | | <p>Our medical center has taken this concern seriously and has investigated the event thoroughly in order to identify any opportunities to improve patient care and safety.</p> <p><u>Immediate Actions Taken</u></p> <ol style="list-style-type: none"> 1. Implemented Standardized Pre-formatted White Boards to provide visual communication to further enhance the verbal handoffs within the surgical suites for all team members related to the case, including sponge, needle and instrument counts. 2. Implemented the use of the sponge pouch system to provide clear individual pouches to visualize each sponge individually during counts. 3. Training to prevent RFO's was presented at OR Staff Meetings. <p>Responsible Party: OR Director</p> <p>Implementation Date: November, 2008</p> | <p>12/30/08</p> <p>12/30/08</p> <p>2/12/09</p> <p>3/10/09</p> |

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. Except for nursing homes, the findings above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 180 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is required to ensure program participation.

| | <p>Continued From page 2</p> <p>through a previous scar. The fascia (the soft tissue component of the connective tissue) was then divided and the abdomen was entered. The adhesions were removed. The small bowel obstruction was resolved. Before closure of the abdominal incision, the surgeon placed Sefracilm (a protective barrier) on top of the omentum under the fascia. The fascia was closed using running #1 Maxon sutures. The skin was closed with staples and a dry dressing was applied to the incision. The documentation revealed that there were no complications during the procedure. Lap sponge count and instrument counts were correct.</p> <p>On 12/9/08 at 9:10 a.m., Staff V stated during an interview that less than five (5) Lap sponges were used to decrease the bleeding and oozing. Staff V stated that towards the end of the surgical case he flushed the abdominal cavity with one (1) liter or more of normal saline, while looking for any retained lap sponges (sterile absorbent gauze, which are used for the removing of excess fluid from the surgical site, for packing, or for tissue retraction. Radiopaque markers are incorporated into all sponges). Staff V stated that he tells the staff when it is time to close the abdominal cavity and he then asks for the "closing stitches." Staff is simultaneously counting the pads and instruments. Staff V stated before he closes the fascia, staff inform him if the "final" count was correct. Staff V stated that he got confirmation that the count was correct and he closed the skin with staples. Staff V stated that he discharged the patient on 11/20/08. The patient's pain level on a scale of 1 - 10 (10 being severe pain) was a 2-3 and the patient did not</p> | | <ul style="list-style-type: none"> An addition was made to the Policy #2427 <i>Sponge, Towel, Needle and Instrument Count</i> regarding reduction of noise levels in the suites during counts. A standard process/format was implemented which defines the required elements of the white board. Interim counts will be documented on the white board. Minimum required elements are sponges, sharps, miscellaneous and packed/tucked items. The sponge/miscellaneous "in and out" items will be announced and recorded on the white board <p>Responsible Party: Executive Committee</p> | |

| | <p>Continued From page 3</p> <p>have any symptoms of an infection (temperature greater than 100.8 Fahrenheit). Staff V stated that the patient had an appointment with him on 12/1/08; however the patient cancelled that appointment and saw her primary physician (12/1/08) instead because she was not feeling well and had constipation. Staff V stated Patient 9's primary physician ordered an x-ray of her abdomen and the x-ray revealed a density (foreign body) in the left mid abdomen. A Computed tomography (CT) scan was completed and confirmed the finding. On 12/1/08, Patient 9 was admitted to the Surgical Department and on 12/2/08 Patient 9 underwent anesthesia /surgery a second time for an exploration for the removal of the retained laparotomy pad (Lap sponge) that was anchored to the kidney. A small portion of the patient's bowel was also removed due to infection caused by the lap sponge. Staff V stated that the sponge count was correct at the end of the second surgery.</p> <p>On 12/9/08 at 10:30 a.m., during an interview RN C stated Patient 9's Exploratory Laparotomy with lysis of adhesions on 11/10/08 started at 8:48 a.m. and she checked out at 7:15 a.m., which was 20 minutes into the case.</p> <p>RN C stated that the relief circulating RN came into the case at 7:10 a.m.</p> <p>RN C stated that when she set up for the case, she and the Surgical Scrub Technician (SST) count aloud the sponges together and then document the count on the white board at the back of the suite.</p> | | <p>5. | | <p>Continued From page 4</p> <p>RN C stated that the sponge count was done with the relief RN before she left the suite. RN C stated that the second count is not documented on the Operative Procedure Record, as this is not the practice of the hospital. In addition, RN C stated that the sponge count and the closing of a cavity are done simultaneously.</p> <p>On 12/9/08 at 11 a.m., SST J stated during an interview that she was the relief SST and had come into the case on 11/10/08 at 7:20 a.m., (approximately 30 minutes after the case had started). SST J stated that she and the relief RN counted about the sponges, needles, and instruments, before the first RN and SST left the case. The count was checked against the white board to double check the counts. SST J described how the counts are to be done. The count starts with the sterile field, Mayo stand, the back table, kick bucket, and the sponge holder in that order. When the surgeon starts suturing (closing of the abdominal cavity) and when the fascia is sutured closed, the surgeon will asked for Septra Film. The RN and the SST start the sponge count and the process is the same as stated above. SST J stated that when they finished the sponge count, it was correct. SST J stated that she does not remember any clean sponges (not used) left on the sterile field. The surgeon could have reused a sponge after it had been counted to pack the cavity and forgot that the sponge was still in the abdominal cavity. SST J stated that the count could have been interrupted by the surgeon, if he had asked for something, but cannot remember that the count had been interrupted by the surgeon. If the count is</p> | | <p>6. | | <p>Continued From page 6</p> <p>interrupted, the count is started over from the beginning. Upon inquiry regarding sponge count and suturing closed the cavity; SST J stated that this happens simultaneously. The surgeons do not wait to close a cavity while the sponge count is being completed.</p> <p>On 12/10/08 at 8:46 a.m., SST F stated during an interview that when the case is handed off to the relief SST and RN, the relief SST and RN count the sponges, needles, and instruments aloud together. The sponge count was correct for the case in question. SST F stated that she keeps a tidy field. SST F stated that she left around 7:30 a.m. and was not there to finish the case.</p> <p>On 12/10/08 at 9 a.m., RN G stated that the relief SST and she did the hand off sponge count aloud. RN G stated that she started with the sterile field, Mayo stand, back table, kick bucket, and the bags (used sponges that hang on a pole). It was a routine count and everything was counted for. The final count happens when the fascia is closed and is completed when the skin is stapled closed. RN G stated that even if the sponge count is done and correct, the surgeon can take a sponge off the field and reuse the sponge without telling the RN or SST. The count of the sponges is started at the same time the surgeon starts to suture close the fascia. There was no x-ray ordered, because in this case the sponge count was correct before the patient left the suite.</p> <p>The policy and procedure titled "Sponge, Towel, Needle, and Instrument Counts," dated 9/08 read</p> | | <p><u>Systemic actions</u></p> <p>1. Continuing Medical Education (CME) was provided to the surgeons and staff entitled <i>Highly Reliable Surgical Team (HRST)</i> including the elimination of Retained Foreign Objects.
