

Focus Area 27: Tobacco Use

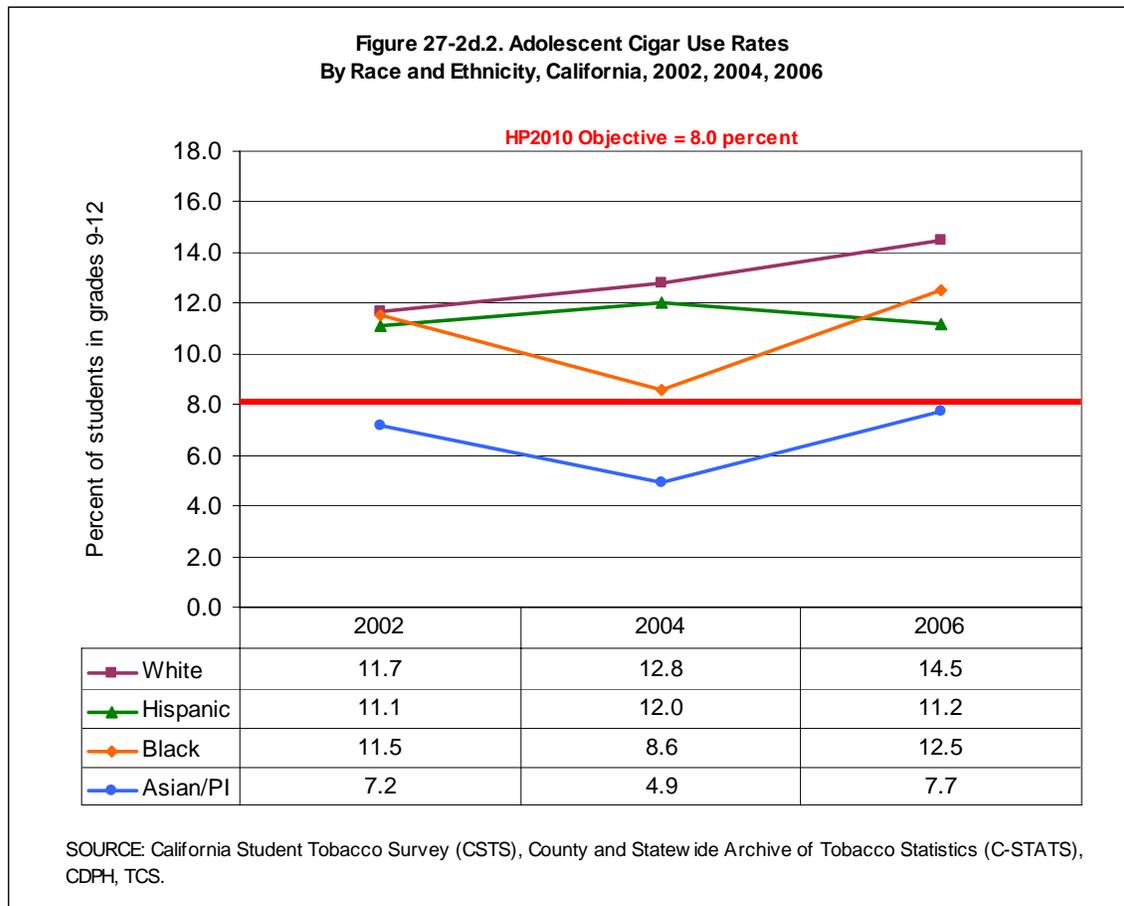

Objective 27-2d. Reduce cigar use in the past month by adolescents. Target = 8.0 percent of students in grades 9 through 12 [State Data Source: California Student Tobacco Survey (CSTS), CDPH, TCS; County and Statewide Archive of Tobacco Statistics (C-STATS), CDPH, TCS]

California data on this objective were available from the CSTS and C-STATS for the years 2002, 2004, and 2006 (**Figure 27-2d.1**). Current cigar use among California students in grades 9 through 12 increased from 10.9 percent in 2002 to 12.2 percent in 2006. This HP2010 objective was not being achieved for California students in grades 9 through 12, and cigar use rates were increasing among this population.

Cigar use for California males in grades 9 through 12 were significantly higher than for females (16.1 percent of males versus 8.2 percent of females in 2006) (**Figure 27-2d.1**). This HP2010 objective was not being achieved for either gender as of 2006.

Data by race and ethnicity (**Figure 27-2d.2**) show that non-Hispanic White youths experienced the highest rates of cigar use (increase from 11.7 percent in 2002 to 14.5 percent in 2006), followed by Black or African American youths (increase from 11.5 percent in 2002 to 12.5 percent in 2006), and Hispanic or Latino youths (increase from 11.1 percent in 2002 to 11.2 percent in 2006). The HP2010 objective was not being achieved for any of these populations as of 2006, but was being achieved for Asian or Pacific Islander (PI) youths during each year surveyed.
