

**CLABSI Table 31. Rates of permanent central line-associated bloodstream infection in patient care locations providing pediatric bone marrow transplant care, reported by California hospitals, January - December 2013 (inclusive)**

Reporting hospital*	Cases	Central line-days	Rate	95% Confidence Interval	Statistical interpretation**
<b>STATE OF CALIFORNIA POOLED DATA</b>	<b>11</b>	<b>5292</b>	<b>2.08</b>

\* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

\*\*Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported in the location category (+)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; pediatric bone marrow transplant special care locations specialize in patients who undergo bone marrow (stem cell) transplant for the treatment of various disorders
