

CLABSI Table 36. Rates of temporary central line-associated bloodstream infection in patient care locations providing pediatric bone marrow transplant care, reported by California hospitals, January - December 2013 (inclusive)

| Reporting hospital* | Cases | Central line-days | Rate | 95% Confidence Interval | Statistical interpretation** |
|--|-----------|-------------------|-------------|-------------------------|------------------------------|
| STATE OF CALIFORNIA POOLED DATA | 13 | 3605 | 3.61 | | |
| CHILDRENS HOSP AND RESEARCH CTR AT OAKLAND | 1 | 32 | ----- | ----- | + |
| CHILDRENS HOSP OF LOS ANGELES | 2 | 1330 | 1.50 | (0.18,5.43) | + |
| CHILDREN'S HOSP OF ORANGE COUNTY, ORANGE | 1 | 16 | ----- | ----- | + |
| RONALD REAGAN UCLA MED CTR, LOS ANGELES | 9 | 2227 | 4.04 | (1.85,7.67) | + |

* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

**Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported in the location category (+)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; ----- indicates data not shown due to too few central line-days reported; pediatric bone marrow transplant special care locations specialize in patients who undergo bone marrow (stem cell) transplant for the treatment of various disorders
