\*Rate per 1000 central line days (total infections/total central line-days multiplied by 1000).

\*\*95% confidence interval calculated for rates based on exact Poisson distribution.

\*\*\* Statistical interpretation indicates hospital-specific rates that were statistically higher (H), lower (L), or no different (N) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported (---).
