

Table 31. Rates of permanent central line-associated bloodstream infection in patient care locations providing pediatric bone marrow transplant care, reported by California hospitals, January - December 2011 (inclusive)

Reporting hospital*	Cases	Central line-days	Rate	95% Confidence Interval	Statistical interpretation**
<b>STATE OF CALIFORNIA POOLED DATA</b>	<b>24</b>	<b>10866</b>	<b>2.21</b>		
CHILDRENS HOSP AND RESEARCH CTR AT OAKLAND	2	1477	1.35	(0.16,4.89)	+
CHILDRENS HOSP OF LOS ANGELES	8	2840	2.82	(1.22,5.55)	+
CHILDREN'S HOSP OF ORANGE COUNTY, ORANGE	4	2614	1.53	(0.42,3.92)	+
RONALD REAGAN UCLA MED CTR, LOS ANGELES	10	3935	2.54	(1.22,4.67)	+

\* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

\*\*Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported (+)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; ----- indicates data not shown due to too few central line-days reported; pediatric bone marrow transplant special care locations specialize in patients who undergo bone marrow (stem cell) transplant for the treatment of various disorders
