* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

**Statistical interpretation indicates hospital-specific rates that were statistically higher (●), lower (○), or no different (⊙) than California average rates, or rates that were not tested due to too few central line-days or too few hospitals reported (†)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; 95% confidence interval calculated for rates based on exact Poisson distribution; ----- indicates data not shown due to too few central-line days reported; trauma critical care locations specialize in care of critically ill patients who require a high level of monitoring and/or intervention following trauma or during critical illness related to trauma
