

Table 32. Rates of permanent central line-associated bloodstream infection in patient care locations providing adult solid organ transplant care, reported by California hospitals, April 2010 - March 2011 (inclusive)

Reporting hospital*	Cases	Central line-days	Patient days	Device utilization ratio	Rate	95% Confidence Interval	Statistical interpretation**	
							CA	U.S.
STATE OF CALIFORNIA POOLED DATA	6	5691	22836	0.25	1.1			
† LOMA LINDA UNIVERSITY MED CTR	0	305	4229	0.07	0.0	(0.0, 9.8)	*	*
LOMA LINDA UNIV HEART & SURGICAL HOSP, REDLANDS								
LOMA LINDA UNIV MED CTR EAST HOSP, LOMA LINDA								
LOMA LINDA UNIV MED CTR, LOMA LINDA								
RONALD REAGAN UCLA MED CTR, LOS ANGELES	6	5147	9246	0.56	1.2	(0.4, 2.5)	*	*
SHARP MEMORIAL HOSP, SAN DIEGO	0	239	9361	0.03	0.0	(0.0, 12.5)	*	*

* Hospitals with only one acute care campus associated with their license were listed by the campus name; hospitals with more than one campus associated with their license were listed by licensee names with acute care campus name(s) indented below

**Statistical interpretation indicates, compared with California (CA) and U.S. average rates, hospital-specific rates that were significantly (statistically) higher (●), lower (○), no different (⊙), not tested due to unstable rates (—) or not tested due to too few hospitals reporting (*)

† Hospital reported infection data aggregated over all acute care campuses

‡ Hospital reported infection data separately by acute care campus

Notes: Rate per 1000 central line days; device utilization ratio is central line days/patient days for months when central lines were used; 95% confidence interval calculated for rates based on exact Poisson distribution; solid organ transplant special care locations specialize in patients requiring postoperative care after solid organ transplant
