

Occupational Safety and Health Professionals

Occupational safety and health professionals share the common goal of identifying hazardous conditions or practices in the workplace and helping employers reduce the risks imposed by such conditions. It is important to assess the availability of such personnel to implement services to prevent work-related injury and illness. The number of these professionals can be estimated by the number of board-certified professionals in occupational medicine and nursing, industrial hygiene, and safety and by the membership of related professional associations. These figures do not account for other occupational health specialties such as fire prevention and ergonomics, and some of the individuals counted may not work full time in occupational safety and health or may perform only research and not provide services to workers. The rate of occupational safety and health professionals per 100,000 employed persons is also calculated.
