

## **WIC Information eXchange (WIX) Release Note #08192013:**

The performance of Web Intelligence documents has been improved in the WIX reporting system. By changing some of the Structured Query Language (SQL) used to create the report, the length of time need to run the query has been significantly reduced.

During testing of the Summarized ISIS Information universe, it was found that the Agency Filter was slowing down the query significantly. A query using CLINIC ID and PARTICIPANT COUNT for some agencies would take up to 5 minutes to run. The same query after removing the OR statement in the Agency Filter would run in 30 seconds.

By removing the OR statement and the statement following it, it will decrease query time on many queries by a factor of 10.
