

Micro Learning Video: NAPS TRF Status Journey

In this video, you will learn about the high-level movement of a TRF through the processing process.

TRF records always have a status assignment and may travel through different statuses at different times as follows:

1. Draft: TRF records that are open with all fields editable.
2. Submitted: TRF records for which data entry is complete and are submitted. All non-portal fields are editable.
3. Specimen Received: eTRF records for which a specimen is received. All fields that were entered at a NAPS Lab will be editable until processed.
4. Specimen Processed: TRF records processed in a nightly batch to create Specimen records. No field is editable.
5. Result Available: Specimen records for which SIS has processed a result. No field is editable.
6. Not Received: TRF records that do not have specimens received by the lab but have been created in Portal. No action needed.
