

Pre- and Post-Training Questions

Module 3 Environmental Cleaning and Disinfection

Facilitator notes: Use the pre- and post-training questions below to gauge knowledge before and after each course. Note that this will add an additional 5-10 minutes before and after each module. You may alternatively use these questions for an optional post-training discussion. Results of these tests can help facilitators determine which infection prevention and control concepts were well-understood during the training session and which need additional time or training. We suggest printing a copy of the pre- and post-training tests for each participant. Answers may be collected anonymously if preferred. Participants should have access to the correct answers after the tests are administered; facilitators may decide to review the questions and answers as a group.

Module 3: Environmental Cleaning and Disinfection Answer Key

Answers are highlighted in yellow.

1. Performing environmental cleaning and disinfection is every healthcare worker's responsibility, including CNAs.
 - a) True
 - b) False
2. What information should you look for when reading a disinfectant label?
 - a) Manufacturer's instructions for use
 - b) Contact/wet time to follow
 - c) Type of germs the disinfectant can kill, e.g., bacteria, virus, spores
 - d) All of the above
3. What is an example of a high-touch surface?
 - a) Bedside table
 - b) Door handle
 - c) Call button
 - d) Light switch
 - e) Bedrail
 - f) All of the above
4. All soiled linen can be placed in the same laundry basket.
 - a) True
 - b) False

5. Which of the following statements about collecting and transporting used linen are true?
- a) Linen should be precleaned at the point of use (e.g., resident room) to help prevent permanent staining
 - b) Soiled and wet linen should be double bagged to prevent leakage
 - c) Used linen should not be shaken or held close to the body
 - d) Hand hygiene and PPE are only necessary if linen is grossly soiled

Module 3 Pre-Training Test: **Environmental Cleaning and Disinfection**

Name:

1. Performing environmental cleaning and disinfection is every healthcare worker's responsibility, including CNAs.
 - a) True
 - b) False

2. What information should you look for when reading a disinfectant label?
 - a) Manufacturer's instructions for use
 - b) Contact/wet time to follow
 - c) Type of germs the disinfectant can kill, e.g., bacteria, virus, spores
 - d) All of the above

3. What is an example of a high-touch surface?
 - a) Bedside table
 - b) Door handle
 - c) Call button
 - d) Light switch
 - e) Bedrail
 - f) All of the above

4. All soiled linen can be placed in the same laundry basket.
 - a) True
 - b) False

5. Which of the following statements about collecting and transporting used linen are true?
 - a) Linen should be precleaned at the point of use (e.g., resident room) to help prevent permanent staining
 - b) Soiled and wet linen should be double bagged to prevent leakage
 - c) Used linen should not be shaken or held close to the body
 - d) Hand hygiene and PPE are only necessary if linen is grossly soiled

Module 3 Post-Training Evaluation: **Environmental Cleaning and Disinfection**

Name:

1. Performing environmental cleaning and disinfection is every healthcare worker's responsibility, including CNAs.
 - a) True
 - b) False

2. What information should you look for when reading a disinfectant label?
 - a) Manufacturer's instructions for use
 - b) Contact/wet time to follow
 - c) Type of germs the disinfectant can kill, e.g., bacteria, virus, spores
 - d) All of the above

3. What is an example of a high-touch surface?
 - a) Bedside table
 - b) Door handle
 - c) Call button
 - d) Light switch
 - e) Bedrail
 - f) All of the above

4. All soiled linen can be placed in the same laundry basket.
 - a) True
 - b) False

5. Which of the following statements about collecting and transporting used linen are true?
 - a) Linen should be precleaned at the point of use (e.g., resident room) to help prevent permanent staining
 - b) Soiled and wet linen should be double bagged to prevent leakage
 - c) Used linen should not be shaken or held close to the body
