

Pre- and Post-Training Questions

Module 4 Skin, Perineal, and Urinary Catheter Care

Facilitator notes: Use the pre- and post-training questions below to gauge knowledge before and after each course. Note that this will add an additional 5-10 minutes before and after each module. You may alternatively use these questions for an optional post-training discussion. Results of these tests can help facilitators determine which infection prevention and control concepts were well-understood during the training session and which need additional time or training. We suggest printing a copy of the pre- and post-training tests for each participant. Answers may be collected anonymously if preferred. Participants should have access to the correct answers after the tests are administered; facilitators may decide to review the questions and answers as a group.

Module 4 Pre-Training Test: **Skin, Perineal, and Urinary Catheter Care Answer Key**

Answers are highlighted in yellow.

1. The perineum refers to the genital and anal area.
 - a) True
 - b) False
