

Pre- and Post-Training Questions

Module 6 Proper Positioning and Transfer

Facilitator notes: Use the pre- and post-training questions below to gauge knowledge before and after each course. Note that this will add an additional 5-10 minutes before and after each module. You may alternatively use these questions for an optional post-training discussion. Results of these tests can help facilitators determine which infection prevention and control concepts were well-understood during the training session and which need additional time or training. We suggest printing a copy of the pre- and post-training tests for each participant. Answers may be collected anonymously if preferred. Participants should have access to the correct answers after the tests are administered; facilitators may decide to review the questions and answers as a group.

Module 6: Proper Positioning and Transfer Answer Key

Answers are highlighted in yellow.

1. When should a CNA report changes on a resident's skin?
 - a) When the resident complains of pain or discomfort.
 - b) When the skin becomes discolored
 - c) When the skin is warm to the touch
 - d) When there are any changes in a resident's skin
 - e) All of the above

2. A CNA can help prevent pressure sores in residents by doing which of the following?
 - a) Observe and report any changes in a resident's skin to a nurse
 - b) Routinely reposition residents
 - c) Avoiding friction and shearing when repositioning a resident
 - d) All of the above

3. When transferring a resident from a bed to a wheelchair, what are the necessary steps to take?
 - a) Perform hand hygiene before transferring the resident
 - b) Pay attention to the correct personal protective equipment (PPE) needed
 - c) Perform hand hygiene after transferring the resident
 - d) Check any tubes for obstruction or kinking
 - e) All of the above

Module 6 Pre-Training Test: **Proper Positioning and Transfer**

Name:

1. When should a CNA report changes on a resident's skin?
 - a) When the resident complains of pain or discomfort.
 - b) When the skin becomes discolored
 - c) When the skin is warm to the touch
 - d) When there are any changes in a resident's skin
 - e) All of the above

2. A CNA can help prevent pressure sores in residents by doing which of the following?
 - a) Observe and report any changes in a resident's skin to a nurse
 - b) Routinely reposition residents
 - c) Avoiding friction and shearing when repositioning a resident
 - d) All of the above

3. When transferring a resident from a bed to a wheelchair, what are the necessary steps to take?
 - a) Perform hand hygiene before transferring the resident
 - b) Pay attention to the correct personal protective equipment (PPE) needed
 - c) Perform hand hygiene after transferring the resident
 - d) Check any tubes for obstruction or kinking
 - e) All of the above

Module 6 Post-Training Evaluation: **Proper Positioning and Transfer**

Name:

1. When should a CNA report changes on a resident's skin?
 - a) When the resident complains of pain or discomfort.
 - b) When the skin becomes discolored
 - c) When the skin is warm to the touch
 - d) When there are any changes in a resident's skin
 - e) All of the above

2. A CNA can help prevent pressure sores in residents by doing which of the following?
 - a) Observe and report any changes in a resident's skin to a nurse
 - b) Routinely reposition residents
 - c) Avoiding friction and shearing when repositioning a resident
 - d) All of the above

3. When transferring a resident from a bed to a wheelchair, what are the necessary steps to take?
 - a) Perform hand hygiene before transferring the resident
 - b) Pay attention to the correct personal protective equipment (PPE) needed
 - c) Perform hand hygiene after transferring the resident
 - d) Check any tubes for obstruction or kinking
 - e) All of the above
