- Rates, percentages and confidence limits are not calculated for zero events.
- Rates are deemed unreliable when based on fewer than 20 data elements. <0.1 Indicates lower confidence limit is less than 0.1 but greater than 0.0.
- <11.0 Refers to Data De-Identification Guidelines (DDG) used to assess risk of publicly released data; as a result, suppression and masking have been applied to this tabular data.

Healthy People (HP) 2020 National Objective has not been established.

- HP 2020 National Objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files. California's data exclude multiple/contributing causes of death.
- Prevalence data are not available in all California counties to evaluate the HP 2020 National Objective STD-1, as the objective is restricted to females
- who are 15-24 years old and identified at a family planning clinic, and males and females under 24 years old who participate in a national job-training program.
- Met (M) refers to the Healthy People 2020 National objectives only.
- Not Met (NM) refers to the Healthy People 2020 National objectives only. NM
- Not Applicable (NA) refers to the Healthy People 2020 National Objectives only.
- Low Number Evaluated; rates/percentages are masked per Data De-Identification Guidelines. LNE
- Notes Crude death rates, crude case rates, and age-adjusted death rates are per 100,000 population. Birth cohort infant death rates are per 1,000 live births. The age-specific birth rates are per 1,000 female population aged 15 to 19 years old.

Previous refers to previous period rates. These periods vary by type of rate: Mortality 2012-2014, Morbidity 2012-2014, Infant Mortality 2011-2013, Natality 2012-2014, Census 2016.
