- Rates, percentages and confidence limits are not calculated for zero events.
- Rates are deemed unreliable when based on fewer than 20 data elements. <0.1 Indicates lower confidence limit is less than 0.1 but greater than 0.0.
- <11.0 Refers to Data De-Identification Guidelines (DDG) used to assess risk of publicly released data; as a result, suppression and masking have been applied to this tabular data. Healthy People (HP) 2020 National Objective has not been established.

HP 2020 National Objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files. California's data exclude multiple/contributing causes of death.

Prevalence data are not available in all California counties to evaluate the HP 2020 National Objective STD-1, as the objective is restricted to females

who are 15-24 years old and identified at a family planning clinic, and males and females under 24 years old who participate in a national job-training program.

Met (M) refers to the Healthy People 2020 National objectives only.

- Not Met (NM) refers to the Healthy People 2020 National objectives only. NM
- NA Not Applicable (NA) refers to the Healthy People 2020 National Objectives only.
- Low Number Evaluated; rates/percentages are masked per Data De-Identification Guidelines. LNE Notes Crude death rates, crude case rates, and age-adjusted death rates are per 100,000 population. Birth cohort infant death rates are per 1,000 live births.

The age-specific birth rates are per 1,000 female population aged 15 to 19 years old. Previous refers to previous period rates. These periods vary by type of rate: Mortality 2012-2014, Morbidity 2012-2014, Infant Mortality 2011-2013, Natality 2012-2014, Census 2016.

California Department of Public Health, Office of AIDS, Surveillance Section reporting periods are: Current Period 2014-2016, Previous Period 2011-2013.
