

## CalREDIE Technical Infrastructure Recommendations

For optimal performance when connecting to the CalREDIE system at CDPH, partners should have an OPT-E-MAN connection to the State's Data Center. If this is not available, a high speed internet connection will suffice. In some cases, the amount of hops that are between the partner's campus and the State's Data Center may need to be reduced for optimal performance. This can be accomplished by implementing static routes to the following locations:

**CalREDIE Staging:** [calrediestaging.cdph.ca.gov](http://calrediestaging.cdph.ca.gov) (158.96.73.92)

**CalREDIE Production** [calredie.cdph.ca.gov](http://calredie.cdph.ca.gov) (158.96.73.93)

The following diagram depicts a recommended infrastructure for participating Local Health Departments.
